

INTERNATIONAL COMMISSION ON RADIOLOGICAL PROTECTION

No. 23

# Report of the Task Group on Reference Man

A REPORT PREPARED BY A TASK GROUP OF COMMITTEE 2 OF THE  
INTERNATIONAL COMMISSION ON RADIOLOGICAL PROTECTION

ADOPTED BY THE COMMISSION IN OCTOBER, 1974

W. S. Snyder *Chairman*  
M. J. Cook            E. S. Nasset  
L. R. Karhausen       G. Parry Howells

## 1 ANATOMICAL VALUES FOR REFERENCE MAN

### I. TOTAL BODY 8

|                                                                                                 |    |
|-------------------------------------------------------------------------------------------------|----|
| A. <b>Weight, Length, and Surface Area of the Total Body and Regions of the Total Body</b>      | 8  |
| 1. <i>Weight (W), Length (L), and Surface Area (SA) of the Total Body during Prenatal Life</i>  | 8  |
| 2. <i>Weight (W), Length (L), and Surface Area (SA) of the Total Body during Postnatal Life</i> | 10 |
| 3. <i>Growth Patterns for Regions of the Total Body during Postnatal Life</i>                   | 20 |
| 4. <i>Composition of the Total Body</i>                                                         | 20 |
| a. <i>Prenatal</i>                                                                              | 20 |
| b. <i>Postnatal</i>                                                                             | 23 |
| 5. <i>Specific Gravity of the Total Body</i>                                                    | 24 |
| 6. <i>Body Cell Mass (BCM)</i>                                                                  | 26 |
| a. <i>Prenatal and Newborn</i>                                                                  | 26 |
| b. <i>Adult</i>                                                                                 | 26 |
| B. <b>Total Body Water and Extracellular and Intracellular Water</b>                            | 27 |
| 1. <i>Total Body Water (TBW)</i>                                                                | 27 |
| a. <i>TBW during Prenatal Life</i>                                                              | 27 |
| b. <i>TBW during Postnatal Life</i>                                                             | 28 |
| 2. <i>Extracellular Water (ECW)</i>                                                             | 29 |
| a. <i>ECW during Prenatal Life</i>                                                              | 29 |
| b. <i>ECW during Postnatal Life</i>                                                             | 31 |
| 3. <i>Intracellular Water (ICW)</i>                                                             | 32 |
| a. <i>ICW during Prenatal Life</i>                                                              | 32 |
| b. <i>ICW during Postnatal Life</i>                                                             | 32 |
| c. <i>Distribution of ICW</i>                                                                   | 32 |
| C. <b>Total Blood, Erythrocytes, Leucocytes, Platelets, and Plasma</b>                          | 32 |
| 1. <i>Total Blood Volume</i>                                                                    | 32 |
| a. <i>Properties of Whole Blood</i>                                                             | 33 |
| b. <i>Composition of Whole Blood</i>                                                            | 34 |

|                                                                                |    |
|--------------------------------------------------------------------------------|----|
| 2. Relationship between Total Blood Volume, Red Cell Volume, and Plasma Volume | 35 |
| 3. Red Cells (Erythrocytes)                                                    | 35 |
| a. Properties of the Red Cells                                                 | 36 |
| b. Composition of Red Blood Cells                                              | 37 |
| 4. White Blood Cells (Leucocytes) and Platelets                                | 37 |
| 5. Plasma                                                                      | 38 |
| a. Volume of Plasma                                                            | 38 |
| b. Properties of Plasma                                                        | 39 |
| c. Composition of Plasma                                                       | 40 |
| <b>D. Body Fat, Adipose Tissue, and Lean Body Mass (LBM)</b>                   | 40 |
| 1. Body Fat                                                                    | 40 |
| a. Body Fat during Prenatal Life                                               | 40 |
| b. Body Fat during Postnatal Life                                              | 41 |
| 2. Adipose Tissue                                                              | 43 |
| a. Composition of Adipose Tissue                                               | 43 |
| b. Weight and Distribution of Adipose Tissue                                   | 44 |
| 3. Lean Body Mass (LBM)                                                        | 44 |
| <b>E. Reticuloendothelial System (RES)</b>                                     | 45 |
| <b>F. Connective Tissue</b>                                                    | 45 |
| 1. Volume and Weight of Dense Connective Tissue                                | 46 |
| 2. Distribution of Connective Tissue                                           | 46 |
| <br>                                                                           |    |
| <b>II. INTEGUMENTARY SYSTEM</b>                                                | 46 |
| <b>A. Skin and Hypodermis</b>                                                  | 46 |
| 1. Thickness of the Epidermis, Dermis, and Hypodermis during Postnatal Life    | 47 |
| a. Newborn                                                                     | 47 |
| b. Adult                                                                       | 47 |
| 2. Weight of the Skin, Epidermis, Dermis and Hypodermis                        | 50 |
| a. Prenatal                                                                    | 50 |
| b. Postnatal                                                                   | 50 |
| 3. Composition of Skin                                                         | 54 |
| 4. Total Blood Content and Blood Flow of the Skin                              | 55 |
| 5. Specific Gravity of Skin                                                    | 56 |
| 6. Cellular Turnover Time for Various Regions of Skin                          | 56 |
| a. Observed Cell Renewal Time for the Epidermis                                | 56 |
| b. Calculated Cell Renewal Time for the Epidermis                              | 57 |
| 7. Daily Production of Horny Material by the Skin of an Adult                  | 57 |
| 8. Glands of the Skin                                                          | 57 |
| a. Eccrine Sweat Glands                                                        | 57 |
| b. Apocrine Sweat Glands                                                       | 57 |
| c. Sebaceous Glands                                                            | 57 |
| <b>B. Hair</b>                                                                 | 58 |
| 1. Weight of Hair of Adults                                                    | 58 |
| 2. Morphological and Growth Characteristics of Hair                            | 58 |
| 3. Composition of Hair                                                         | 59 |
| 4. Specific Gravity of Hair                                                    | 59 |
| <b>C. Nails</b>                                                                | 59 |
| 1. Weight of Nails                                                             | 59 |
| 2. Dimensions of Adult Fingernails                                             | 59 |
| 3. Growth Rate of Nails                                                        | 59 |
| 4. Composition of Nails                                                        | 62 |
| 5. Specific Gravity of Nails                                                   | 62 |

|                                                                                                                         |           |
|-------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>III. SKELETON, CARTILAGE, NONSKELETAL DENSE CONNECTIVE TISSUE (TENDONS, FASCIA, PERIARTICULAR TISSUE), AND TEETH</b> | <b>62</b> |
| <b>A. Skeleton</b>                                                                                                      | <b>62</b> |
| 1. <i>Weight of the Skeleton</i>                                                                                        | 62        |
| a. <i>Prenatal</i>                                                                                                      | 62        |
| b. <i>Postnatal</i>                                                                                                     | 62        |
| 2. <i>Volume of the Postnatal Skeleton</i>                                                                              | 64        |
| 3. <i>Types of Bone Tissue</i>                                                                                          | 66        |
| a. <i>Cortical, Compact, or Dense Bone</i>                                                                              | 66        |
| b. <i>Trabecular, Cancellous, or Spongy Bone</i>                                                                        | 68        |
| 4. <i>Surfaces of Bone</i>                                                                                              | 69        |
| 5. <i>Specific Gravity of Bone and Skeleton</i>                                                                         | 70        |
| a. <i>Specific Gravity of Hydrated Cortical Bone Tissue</i>                                                             | 71        |
| b. <i>Specific Gravity of Hydrated Trabecular Bone Tissue</i>                                                           | 71        |
| 6. <i>Composition of the Skeleton</i>                                                                                   | 71        |
| a. <i>Composition of Whole Bones with Marrow and Skeleton of the Fetus, Newborn, and Infant</i>                         | 71        |
| b. <i>Skeletal Composition as a Function of Age</i>                                                                     | 73        |
| c. <i>Composition of Cortical and Trabecular Type Bone</i>                                                              | 74        |
| 7. <i>Blood Content of the Skeleton</i>                                                                                 | 74        |
| 8. <i>Biodynamics of Bone</i>                                                                                           | 74        |
| 9. <i>Patterns of Skeletal Ossification</i>                                                                             | 76        |

| <b>O. Summary of Model Values for Daily Balance of Elements in Reference Man</b> | 365 |
| 1. <i>Aluminium</i>                                                              | 367 |
| 2. <i>Antimony</i>                                                               | 368 |
| 3. <i>Arsenic</i>                                                                | 369 |
| 4. <i>Barium</i>                                                                 | 370 |
| 5. <i>Beryllium</i>                                                              | 371 |
| 6. <i>Bismuth</i>                                                                | 371 |
| 7. <i>Boron</i>                                                                  | 372 |
| 8. <i>Bromine</i>                                                                | 372 |
| 9. <i>Cadmium</i>                                                                | 373 |
| 10. <i>Calcium</i>                                                               | 374 |
| 11. <i>Carbon</i>                                                                | 377 |
| 12. <i>Cesium</i>                                                                | 378 |
| 13. <i>Chlorine</i>                                                              | 378 |
| 14. <i>Chromium</i>                                                              | 380 |
| 15. <i>Cobalt</i>                                                                | 381 |

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| 16. Copper                                                                          | 382 |
| 17. Fluorine                                                                        | 383 |
| 18. Germanium                                                                       | 385 |
| 19. Hydrogen                                                                        | 385 |
| 20. Iodine                                                                          | 386 |
| 21. Iron                                                                            | 387 |
| 22. Lead                                                                            | 390 |
| 23. Lithium                                                                         | 391 |
| 24. Magnesium                                                                       | 392 |
| 25. Manganese                                                                       | 393 |
| 26. Mercury                                                                         | 394 |
| 27. Molybdenum                                                                      | 396 |
| 28. Nickel                                                                          | 397 |
| 29. Niobium                                                                         | 398 |
| 30. Nitrogen                                                                        | 398 |
| 31. Oxygen                                                                          | 400 |
| 32. Phosphorus                                                                      | 400 |
| 33. Polonium                                                                        | 402 |
| 34. Potassium                                                                       | 403 |
| 35. Radium                                                                          | 404 |
| 36. Rubidium                                                                        | 405 |
| 37. Selenium                                                                        | 406 |
| 38. Silicon                                                                         | 407 |
| 39. Silver                                                                          | 407 |
| 40. Sodium                                                                          | 408 |
| 41. Strontium                                                                       | 409 |
| 42. Sulfur                                                                          | 411 |
| 43. Tellurium                                                                       | 412 |
| 44. Thallium                                                                        | 412 |
| 45. Thorium                                                                         | 413 |
| 46. Tin                                                                             | 413 |
| 47. Titanium                                                                        | 414 |
| 48. Uranium                                                                         | 415 |
| 49. Vanadium                                                                        | 416 |
| 50. Zinc                                                                            | 416 |
| 51. Zirconium                                                                       | 418 |
