INTEGRATIVE ACTIVITY OF THE BRAIN

An Interdisciplinary Approach

By

JERZY KONORSKI, M.D.

Professor of Neurophysiology, Nencki Institute of Experimental Biology, Warsaw, Poland

CHICAGO AND LONDON
THE UNIVERSITY OF CHICAGO PRESS
3. The concept of gnostic units 73
4. Psychological evidence of the existence of gnostic units 77
5. Neurological evidence of the existence of gnostic units 84
6. The problem of the formation of gnostic units 86
7. The redundancy of units in the gnostic field 90
8. Perception of similar patterns and the problem of discrimination 93
9. The problem of the formation of new gnostic fields 97
10. The problem of habituation 99
11. Summary and conclusions 104
References to Chapter II 108

Chapter III
Categories of Perceptions in Particular Analyzers 111
1. Introductory remarks 111
2. Categories of unitary perceptions in visual analyzer (V) 113
3. General properties of visual gnosis 124
4. Categories of unitary perceptions in the acoustic analyzer (A) 127
5. Unitary perceptions in olfactory (Ol) and vestibular (La) analyzers 132
6. Categories of unitary perceptions in the somesthetic and gustatory analyzers (S) 132
7. Central organization of the kinesthetic analyzer (K) 139
8. Categories of kinesthetic unitary perceptions 147
9. Perceptions of emotional states 157
10. Summary and conclusions 159
References to Chapter III 163

Chapter IV
General Physiology of Associations 166
1. Introductory remarks 166
2. Physiological basis of images 170
3. Physiological basis of hallucinations 174
CONTENTS

4. Properties of unitary images 181
5. The strength of unitary images 183
6. Interrelations between perceptions and associations 185
7. Methods of the study of associations 187
8. Kinesthetic images and their relations to movements 190
9. Programming of motor acts with and without their execution 197
10. General pathology of associations 202
11. Summary and conclusions 207

References to Chapter IV 211

Chapter V

A Survey of the Main Associations in Man and Animals 213

1. Introductory remarks 213
2. Associations directed to the visual analyzer 217
3. Associations directed to the auditory analyzer 229
4. Associations directed to the somesthetic analyzer 231
5. Associations directed to the kinesthetic analyzer 239
6. Associations directed to the emotive analyzer 256
7. Summary and conclusions 260

References to Chapter V 263

Chapter VI

Classical Conditioned Reflex (Type I) 265

1. Introductory remarks 265
2. The identity of conditioned and unconditioned response in classical conditioning 268
3. Food conditioned reflex 270
4. Hunger conditioned reflex 275
5. Defensive conditioned reflexes 280
6. Associations between neutral stimuli involved in conditioning experiments ("sensory preconditioning") 286
7. The magnitude of classical conditioned reflexes 288
Chapter VIII

Instrumental Conditioned Reflexes (Type II): Earlier Experimental Evidence and Concepts, 1928–39

1. Introductory remarks
2. First experiments on type II conditioned reflexes
3. Original concept concerning type II conditioning
4. Interrelations between salivary and motor responses in type II conditioning
5. Interrelations between type I and type II conditioned reflexes
6. Two other varieties of type II conditioned reflexes
CONTENTS

7. The transfer of type II conditioned reflexes 383
8. Summary and conclusions 389
   References to Chapter VIII 392

Chapter IX

Type II Conditioned Reflex and Drive 393

1. Introductory remarks 393
2. The role of drive and arousal in type II conditioning 395
3. The control of alimentary instrumental responses by hunger drive 403
4. The interrelations between salivary and motor responses in type II conditioning 409
5. The mechanism of the defensive type II conditioned reflexes 415
6. Summary and conclusions 419
   References to Chapter IX 421

Chapter X

Structure of the Type II Conditioned Reflex Arc 424

1. Introductory remarks 424
2. The cooperation of the CS-D-M and CS-M connections in instrumental conditioned reflexes 427
3. The relation of type II conditioned reflexes to the experimental situation 432
4. M₁-M₂ differentiation under the same US reinforcement 435
5. M₁-M₂ differentiation under different US reinforcements 444
6. The problem of inhibition of type II conditioned reflexes 448
7. Summary and conclusions 456
   References to Chapter X 458

Chapter XI

The Origin and Physiological Basis of Instrumental Movement 461

1. Introductory remarks 461
2. Instrumentalization of the reflex movements 463
CONTENTS

3. Instrumental responses originating in passive movements 467
4. Instrumentalization of movements obtained by brain stimulation 470
5. The role of proprioceptive feedback in type II conditioning 475
6. The mechanism of instrumental movement 479
7. Summary and conclusions 485
References to Chapter XI 487

Chapter XII
Transient (or Dynamic) Memory 490
1. Introductory remarks 490
2. Transient memory of perceptions 491
3. Transient memory of associations 496
4. Transient memory in experimentation in animals 497
5. Summary and conclusions 502
References to Chapter XII 503

Chapter XIII
The General Architecture of the Integrative Brain Function 506
1. Introductory remarks 506
2. Afferent systems and perceptual learning 507
3. Inborn associative systems (unconditioned reflexes) 509
4. Acquired associative systems (associative learning) 511
5. Classical conditioned reflexes as particular instances of acquired associations 512
6. Instrumental (type II) conditioned reflexes 513
7. Transformations of associations 514
8. The mechanism of efferent systems 516
9. Transient (or recent) memory 518
