

ENERGETICS AND MECHANISMS
IN
RADIATION BIOLOGY

*Proceedings of a NATO Advanced Study Institute
held at Portmeirion, April 1967*

Edited by

GLYN O. PHILLIPS

University of Salford, England

ACADEMIC PRESS · 1968
LONDON AND NEW YORK

Contents

CONTRIBUTORS	v
PREFACE	vii

Primary Physical and Chemical Processes

JOSEPH J. WEISS

I. Introduction	1
II. Water and aqueous systems	1
III. Electron-hole pairs as primary active species	2
IV. Photochemistry	8
References	8

Reactions of Electron-Hole Pairs in γ -irradiated Ice and Frozen Aqueous Solutions

JOSEPH J. WEISS

I. Introduction	11
II. Acid frozen aqueous systems	12
III. Alkaline frozen aqueous systems	16
References	19

The Solvated Electron in Ice

LARRY KEVAN

I. Introduction	21
II. EPR of irradiated ice	22
III. Reactions of mobile electrons in ice	24
IV. The trapping site of e_2^- in ice	27
V. Formation of trapped dielectrons in ice	30
References	32

The Chemistry of the Electron in Condensed Media

D. M. BROWN AND F. S. DAINTON

I. Introduction	35
II. Preparation of homogeneous solutions in condensed media of hydrogen atoms and electrons	37
III. Physical properties of the solvated and trapped electron in aqueous media	40
IV. Diagnostic reagents for the electron and for hydrogen atoms	44
V. Relative rates of reaction of two solutes	47
VI. Specific rate constants for electron reactions	50
VII. The lifetime of the ion atmosphere of the aquated electron	54
VIII. The reaction $H + OH_{aq}^- \longrightarrow e_{aq}^-$	56
IX. The electron in other media	57
References	58

Aspects of Charge Transfer in Organic Systems based on Experiments with Organic and Protonic Semiconductors

N. RIEHL

I. Introduction	61
II. Electronic and defect-electronic conductance of organic solids	63
III. Mobility of protons in hydrogen bridge systems	68
References	75

Principles, Techniques and the Design of Experiment in Pulse Radiolysis

G. E. ADAMS AND B. D. MICHAEL

I. Introduction	77
II. Equipment	80
III. The experimental approach	88
IV. Radical-solute reactions	90
V. Conclusions	100
References	101

Properties of Solvated Electrons

JOHN K. THOMAS

I. Introduction	103
II. Spectra of solvated electrons	104
III. Rate processes of solvated electrons	108
References	115

Chemical Transformation of Organic Compounds Induced by γ -Irradiation

D. SCHULTE-FROHLINDE

I. Introduction	117
II. Reactions of OH-radicals	118
III. Reactions of electrons	126
IV. Reactions of H-atoms	127
References	128

Radiation Effects on Carbohydrates

GLYN O. PHILLIPS

I. Introduction	131
II. Radiolysis of aqueous aldohexoses	132
III. Effects of radiation on the solid state	139
References	151

Radiation Effects on Cellulose

JETT C. ARTHUR, JR.

I. Introduction	153
II. Fibrous cellulose	155
III. Energy transfer processes	157
IV. Primary effects	159
V. Intramolecular energy transfer	167
VI. Morphological properties	171
VII. Physical properties	175
VIII. Chemical properties	176
IX. Conclusions	179
References	179

Mechanisms of Energy Transfer

TH. FÖRSTER

I. Introduction	183
II. Theory of excitation transfer	185
III. Experimental investigations	192
IV. Applications to biological systems	197
References	198

Energy Transfer, Migration and Diffusion in Aromatic Liquid Solutions

J. B. BIRKS

I. Introduction	203
II. The choice of a scintillator solute	203
III. Monomeric solvent-solute energy transfer	206
IV. Experimental studies of solvent-solute energy transfer	207
V. The theory of monomeric solvent-solute energy transfer process	209
VI. Solvent excimerization	211
VII. Excimeric solvent-solute energy transfer	213
VIII. Relation of solvent excimerization to diffusion and migration	214
IX. The solvent-solute energy transfer process	217
References	220

Excitons in Biomolecules

R. MASON

I. Introduction	223
II. The exciton model	223
References	225

Studies of Energy Transfer by Pulse Radiolysis

R. B. CUNDALL

I. Introduction	227
II. Early work	228
III. The work of McCollum, Wilson and Nevitt	228
IV. The formation of triplet states in organic solvents	233
V. Energy transfer and intersystem crossing in pulsed systems	236
VI. Nanosecond pulse radiolysis	237
VII. Some recent studies on biacetyl solutions	238
VIII. Conclusions	240
References	241

Fluorescence and Luminescence in Biology

E. J. BOWEN

I. Fluorescence	243
II. Use in biochemistry	249

III. Chemiluminescence	250
References	251

Excimer Formation and Relaxation Modes

B. STEVENS

I. Introduction	253
II. The photoassociation efficiency	257
III. Excimer relaxation parameters	259
IV. Origin of the excimer binding energy	262
V. Photoassociation in pure systems	265
References	268

Energy Transfer in Bioluminescence

JOHN LEE

I. Introduction	269
II. Experimental	271
III. Chemiluminescence of luminol	271
IV. Bioluminescence	273
V. Summary	274
References	274

Radiolysis of Fluorescein Dyes

L. I. GROSSWEINER

I. Introduction	277
II. Pulse radiolysis results	282
III. Cobalt-60 irradiations	292
IV. Summary	298
References	299

Production of Hydrated Electrons by Flash Photolysis

L. I. GROSSWEINER

I. Introduction	303
II. Experimental procedures	305
III. A survey of flash photolysis results	306
IV. Discussion	316
V. Summary	320
References	320

Aspects of Radiation Reactions in Polymers

A. CHARLESBY

I. Introduction	323
II. Basic changes in irradiated polymers	324
III. Intermediate reactions	327
IV. Polymers in solution	330
V. Conclusion	332

Pulse Radiolysis and Radiobiology

G. E. ADAMS AND B. D. MICHAEL

I. Introduction	333
II. The reducing effects of ionizing radiation	334
III. Radiosensitization by electron-affinic compounds	338
IV. Pulse radiolysis of—SH compounds	342
V. Free radical repair by sulphhydryl compounds	347
References	351

Some Physico-Chemical Approaches to Radiation Biology

M. EBERT

I. Introduction	353
II. The chemical approach	354
III. Biological material for chemical investigation	355
IV. Chemical structure relevant to radiobiology	358
References	360

The Use of Electron Spin Resonance in the Study of the Radiation Effects on Solids of Biological Interest

ADOLF MÜLLER

I. Introduction	361
II. Identification of radicals by qualitative ESR-spectroscopy	361
III. Quantitative ESR-spectroscopy	367
References	374

Energy Localization in Materials of Biological Interest

R. KOCH AND H. MÖNIG

I. Introduction	377
II. Sulphur-containing compounds	378

III. Other organic compounds	379
IV. Qualitative effects	380
V. Discussion	384
References	384

Radiation Effects on the Connective Tissue Matrix

H. B. LAMBERTS

I. Introduction	387
II. Methods applied to study radiation effects	388
III. Conclusion	395
References	396

Some Practical Consequences of the X-ray Depolymerization of the Connective Tissue Matrix

H. B. LAMBERTS

I. Introduction	397
II. Effect of irradiation on blood vessels	398
III. Effect of irradiation on the heart	402
IV. Effect of irradiation on the eye	405
V. Conclusion	407
References	408

The Recovery of Microorganisms from the Effects of Ionizing Radiation

D. E. HUGHES

I. Introduction	409
II. Experimental	413
III. Discussion	420
References	422

Genetic Implications of DNA Repair

R. H. HAYNES, R. M. BAKER AND G. E. JONES

I. Introduction	425
II. General aspects of repair	427
III. Dark repair of DNA structural defects	433
IV. Replication and repair	438

V. Repair and the interpretation of inactivation curves	440
VI. Transcription and repair	444
VII. Mutation and repair	446
VIII. Recombination and repair	448
IX. The question of repair in mammalian cells	458
X. Conclusion	460
References	461

The Inactivation of some Enzymes in Aqueous Solution by Atomic Hydrogen

GABRIEL STEIN

I. Introduction	467
II. Atomic hydrogen in aqueous solution	468
III. One-electron versus two-electron processes. The inactivation of DPN ⁺ by radiations	469
IV. One-electron reagents and the role of metal prosthetic groups in enzyme proteins: cytochrome-C	470
V. The role of reduction processes in the radiation inactivation of some biochemically important systems	471
VI. The reaction of H atoms with some hydrolytic enzymes	472
VII. Conclusion	474
VIII. Summary	476
References	477

Radiation-Induced Double- and Single-Strand Breaks in Phage DNA

D. L. DEWEY

I. Introduction	479
II. Applications of measuring technique	479
III. Results of measuring technique	480
References	484

Possible Significance of Defect Centres in the Radiation Chemistry of Solids

J. M. THOMAS AND J. O. WILLIAMS

I. Introduction	485
II. Point defects	485
III. Dislocations	486
IV. Model System	488
References	491

Thermoluminescence Studies of Irradiation Effects in Molecular Solids

B. THOMAS, E. HOUSTON AND J. C. WEEKS

I. Introduction	493
II. Theory	494
III. Peak analysis	496
IV. Experimental results	497
V. Conclusions	500
References	501
AUTHOR INDEX	503
SUBJECT INDEX	521
