Taylor & Francis
Publishers since 1798

Contents

<i>Preface</i>	<i>page vii</i>
1 Polysaccharides and their Potential for Biotechnology	1
1.1 An introduction to polysaccharides	1
1.2 The potential for biotechnology	27
References	44
2 Structural Polysaccharides	47
2.1 Pectin	47
2.2 Cellulose and hemicelluloses	65
2.3 Xylans and xylanases	73
2.4 The 'gum' mannans: locust bean gum, guar and konjac mannan	78
2.5 Gum exudates	88
2.6 Glycosaminoglycans	90
References	91
3 Storage Polysaccharides: Starch and Fructans	95
3.1 Starch	95
3.2 Glycogen	117
3.3 Minor storage polysaccharides	118
3.4 Fructans: inulin and levan	118
References	122
4 Marine Polysaccharides	123
4.1 Alginates and brown seaweed	123
4.2 Carrageenans and red seaweed	134
4.3 Agar and agarose	141
4.4 Chitosan and chitin derivatives	144
References	151
5 Some Bacterial and Synthetic Polysaccharides	155
5.1 Biotechnology	155
5.2 Bacterial alginates	156

Contents

5.3	Xanthan	158
5.4	Pullulan	163
5.5	Gellan, XM6 and curdlan	163
5.6	Dextrans	164
5.7	Cyclodextrins	165
5.8	Scleroglucan and schizophyllan	171
5.9	Synthetic polysaccharides: use of enzymes	172
	References	177
	<i>Index</i>	179
