Contributors	xv
Preface	xix
Acknowledgments	xxi

1 NEWTON MORTON'S CONTRIBUTIONS

1 Newton Morton: The Wisconsin Years 3

James F. Crow

Newton Morton: The Wisconsin Years	3
References	5

2 Newton Morton's Influence on Genetics: The Morton Number 7

Daniel E. Weeks

I. The Morton Number	7
II. Data	8
References	10

2 OVERVIEW AND PRELIMINARIES

3 Genetic Dissection of Complex Traits: An Overview 13

D. C. Rao

I. Summary	13
II. Introduction	14
III. Existence of Genetic Effects	17
IV. Overall Study Design	19
V. Other Issues Related to Study Design	23
VI. Lumping and Splitting as a Strategy	26
VII. Discussion	30
References	32

4 Familial Resemblance and Heritability 35

Treva K. Rice and Ingrid B. Borecki

- I. Summary 35
- II. Introduction 36
- III. Familial Resemblance and Heritability 37
- IV. Study Designs and Multifactorial Models 38
- V. Discussion 42
- References 43

5 Linkage and Association: Basic Concepts 45

Ingrid B. Borecki and Brian K. Suarez

- I. Summary 45
- II. Introduction 46
- III. Historical Perspective 47
- IV. Fundamentals and Methods 49
- V. Contemporary Approaches 56
- VI. Challenges and Issues 58
- References 63

3 PHENOTYPES AND GENOTYPES

6 Definition of the Phenotype 69

John P. Rice, Nancy L. Saccone, and Erik Rasmussen

- I. Summary 69
- II. Introduction 70
- III. The Benefits of a Narrowly Defined Disease Phenotype 70
- IV. Endophenotypes and Quantitative Traits 71
- V. The Impact of Diagnostic and Measurement Error 73
- VI. Discussion 74
- References 75

7 Genotyping for Human Whole-Genome Scans: Past, Present, and Future 77

James L. Weber and Karl W. Broman

- I. Summary 77
- II. Introduction: Genotyping Past 78
- III. Genotyping Present 79

IV. Genotyping Future	90
V. Conclusions	94
References	94

4 MODEL-BASED METHODS FOR LINKAGE ANALYSIS

8 The Lod Score Method 99

John P. Rice, Nancy L. Saccone, and Jonathan Corbett

I. Summary	99
II. Introduction	100
III. The Generalized Single Major Locus Model	100
IV. The Lod Score	101
V. The Lod Score and Meta-analysis	104
VI. The Probability of Detecting Linkage	106
VII. Model-free Linkage Methods	108
VIII. Discussion	112
References	112

9 Extension of the Lod Score: The Mod Score 115

Françoise Clerget-Darpoux

I. Summary	115
II. Introduction	116
III. Misspecifying Genetic Parameters at the Disease Locus in Lod Score Analysis	117
IV. The Mod Score Function	119
V. Conclusion	122
References	123

10 Major Strengths and Weaknesses of the Lod Score Method 125

Jurg Ott

I. Summary	125
II. Introduction	126
III. Genes Underlying Complex Traits	127
IV. Weaknesses of Lod Score Method	127
V. Strengths of the Lod Score Method	129
References	131

	V. Discussion	190
	References	190
14	The Future of Genetic Case-Control Studies	191
	Nicholas J. Schork, Dani Fallin, Bonnie Thiel, Xiping Xu, Ulrich Broeckel, Howard J. Jacob, and Daniel Cohen	
	I. Summary	192
	II. Introduction	192

III. Stratification	194
IV. Assessing Statistical Significance	196
V. Multiple Linked Loci and Haplotype Analysis	199
VI. Haplotype Diversity and Allelic Heterogeneity	200
VII. Genetic Background and Allelic Heterogeneity	201
VIII. Genetic Outlier Detection	204
IX. Genetic Matching	204
X. Assessing Power and Linkage Disequilibrium Strength	205
XI. Assessing Admixture	205
XII. Pleiotropy and Physiologic Significance	206
XIII. Discussion	209
References	210

15 Cost of Linkage versus Association Methods 213

Christopher I. Amos and Grier Page

I. Summary	213
II. Introduction	214
III. Methods	215
IV. Results	217
V. Discussion	218
References	220

16 Genotype-Environment Interaction in Transmission Disequilibrium Tests 223

Lindon J. Eaves and Patrick Sullivan

I. Summary	224
II. Introduction	224
III. Model for Genetic and Environmental Risk	226
IV. Generalizing the Approach to Allow for $G \times E$ and Other Interactions	228
V. Evaluation of the Method through Simulation	229
VI. Conclusions and Discussions	238
References	240

17 Major Strengths and Weaknesses of Model-free Methods 241

David E. Goldgar

I. Summary	241
II. Introduction	242

III. Nonparametric Methods in Statistics	244
IV. Do We Need Model-free Methods?	244
V. Quantitative Traits	249
VI. Discussion	249
References	250

6 MORE RECENT METHODS

18 Meta-analysis for Model-free Methods 255

Chi Gu, Michael A. Province, and D. C. Rao

I. Summary	255
II. Introduction	256
III. Meta-analysis of Genetic Studies	258
IV. Practical Issues	265
V. Discussion	267
References	271

19 Classification Methods for Confronting Heterogeneity 273

Michael A. Province, W. D. Shannon, and D. C. Rao

I. Summary	273
II. Introduction	274
III. Coping with the Challenges	274
IV. Recursive Partitioning Models	277
V. Discussion	284
References	285

20 Applications of Neural Networks for Gene Finding 287

Andrea Sherriff and Jurg Ott

I. Summary	287
II. Introduction	288
III. Description of Artificial Neural Networks	288
IV. Interaction among Genes Underlying Complex Traits	291
V. Applications of Neural Networks to Genetic Data	292
VI. Discussion	295
References	296

21 Genome Partitioning and Whole-Genome Analysis 299

Nicholas J. Schork

- I. Summary 299
- II. Introduction 300
- III. The Basic Model 301
- IV. WG and GP Analysis with Human Family Data 304
- V. WG and GP Analysis with Inbred Model Organism
Crosses 310
- VI. Human Population-Based Studies 314
- VII. Extensions to Basic MIVC Model 317
- VIII. Discussion and Conclusion 318
- References 319

22 Deciphering the Genetic Architecture of a Multivariate Phenotype 323

Saurabh Ghosh and Partha P. Majumder

- I. Summary 323
- II. Introduction and Objective 324
- III. Scenarios and Models 325
- IV. Methodology 329
- V. Results and Discussion 333
- VI. Conclusions 346
- References 347

7 OPTIMUM STRATEGIES

23 On the Resolution and Feasibility of Genome Scanning Approaches 351

Joseph D. Terwilliger

- I. Summary 352
- II. Introduction 352
- III. Mapping a Locus with Known Genotypes 353
- IV. Mapping a Locus Influencing Some Phenotype (Genotypes
Uncertain) 362
- V. Allowing for Trait Locus Genotype Misclassifications 365
- VI. "Model-Based" and "Model-free" Methods: A False
Dichotomy 374

VII. Complex Disease Gene Mapping: Is It Possible?	380
VIII. Conclusions	387
References	389

24 The Role of Interacting Determinants in the Localization of Genes 393

W. James Gauderman and Duncan C. Thomas

I. Summary	393
II. Introduction	394
III. Penetrance Models Incorporating Interaction Effects	394
IV. Segregation Analysis	396
V. Linkage Analysis	398
VI. Association Studies	405
VII. Treatment of Missing Covariate Data	407
VIII. Conclusion	408
References	409

25 Linkage Disequilibrium Mapping: The Role of Population History, Size, and Structure 413

N. H. Chapman and E. A. Thompson

I. Summary	413
II. Introduction	414
III. IBD and Allelic Associations at a Single Locus	415
IV. Allelic Associations between Two Loci	417
V. Estimation of Θ from Observed Associations	428
VI. Effects of Size and Structure on Allelic Associations	428
VII. Structure in Human Populations: Some Examples	431
References	434

26 Optimum Study Designs 439

Chi Gu and D. C. Rao

I. Summary	439
II. Introduction	440
III. Phenotyping and Genotyping Issues	441
IV. Sampling Issues	442
V. Sample Size and Power	446
VI. Cost-Benefit Issues	451
VII. Discussions	454
References	456

27. One-Stage versus Two-Stage Strategies for Genome Scans 459

Xiuqing Guo and Robert C. Elston

- I. Summary 460
- II. Introduction 460
- III. One-Stage and Two-Stage Procedures 461
- IV. Two-Stage Global Search Designs Using Discordant Relative Pairs 461
- V. Using Both Discordant and Affected Relative Pairs 464
- VI. Effect of Genetic Heterogeneity and Incomplete Marker Information 467
- VII. The Computer Program DESPAIR 468
- VIII. Discussion 469
- References 470

8 MULTIPLE COMPARISONS AND SIGNIFICANCE LEVELS

28. Significance Levels in Genome Scans 475

Glenys Thomson

- I. Summary 475
- II. Introduction 476
- III. Approaches for Complex Diseases 477
- IV. Genome-Wide Linkage Scans in Complex Diseases 478
- V. Genome-Wide Association Scans in Complex Diseases 480
- VI. Discussion 482
- References 484

29. False Positives and False Negatives in Genome Scans 487

D. C. Rao and Chi Gu

- I. Summary 487
- II. Introduction 488
- III. False Positives and False Negatives 488
- IV. Trade-off between False Positives and False Negatives 493
- V. Discussion 496
- References 497
