Fluorescent *in Situ* Hybridization for the Diagnosis of Genetic Disease at Postnatal, Prenatal, and Preimplantation Stages

Darren K. Griffin

I. Introduction	1
II. Origin of Samples	3
III. Fluorescent <i>in Situ</i> Hybridization	6
IV. Sexing of Human Cells	21
V. Further Fluorescent <i>in Situ</i> Hybridization Diagnoses	25
VI. Concluding Remarks	33
References	35

Isolation and Function of Human Dendritic Cells

Lisa A. Williams, William Egner, and Derek N. J. Hart

I. Introduction and Overview	41
II. Blood and Bone Marrow Dendritic Cells	47
III. Nonlymphoid and Interstitial Dendritic Cells	53
IV. Lymphoid Dendritic Cells	64
V. Dendritic Cell Ontogeny: Differentiation and Migration	68
VI. Functional Properties of Human Dendritic Cells	73
VII. Dendritic Cell Malignancies	85
VIII. Role of Dendritic Cells in Transplantation, and Infectious and Autoimmune Diseases ...	86
IX. Clinical Applications	90
X. Future Dendritic Cell Research and Applications	90
References	91

Granulated Lymphoid Cells of the Pregnant Uterus: Morphological and Functional Features

Chau-Ching Liu, Earl L. Parr, and John Ding-E Young

I. Introduction	105
II. Cells Associated with Decidual Tissue	106
III. Granulated Metrial Gland Cells of Rodents	110
IV. Human Endometrial Granulocytes	117
V. Possible Functions of Uterine Granulated Cells during Pregnancy	122
VI. Concluding Remarks	126
References	127

The Replication Band of Ciliated Protozoa

Donald E. Olins and Ada L. Olins

I. Introduction	137
II. Early History: Prior to 1959	140
III. Functional Characteristics of Replication Bands in Cells	143
IV. Replication Band Ultrastructure	148
V. Cytochemical and Immunochemical Studies on Replication Bands	154
VI. Relevance to Current Models of Chromatin Replication	161
VII. Conclusions and Speculations	166
References	168

Whole-Chromosome Hybridization

S. D. Bouffler

I. Introduction	171
II. Development and Principles of Whole-Chromosome Hybridization Techniques	174
III. Applications of Whole-Chromosome Hybridization	197
IV. Concluding Remarks	219
References	220

Neuronal Modulation and Plasticity *in Vitro*

Robert A. Smith and Zhi-Gang Jiang

I. Introduction	233
II. Neuronal Cell Cultures	235

CONTENTS

vii

III. Neurite Initiation and Elongation	237
IV. Synaptic Connections between Cultured Neurons	263
V. Phenotypic Expression	270
VI. Concluding Remarks	279
References	281
Index	297
