Autoregulation of Angiogenesis by Cells of the Vessel Wall

R. F. Nicosia and S. Villaschi

I. Introduction	1
II. Vasculogenesis and Angiogenesis	2
III. Evidence That Blood Vessels Can Autoregulate Angiogenesis: Rat Aorta Model	5
IV. Interactions between Endothelial Cells and Fibroblasts or Smooth Muscle Cells	7
V. Growth Factors and Other Soluble Regulators of Angiogenesis Produced by Cells of the Vessel Wall	9
VI. Proteolytic Enzymes	17
VII. Extracellular Matrix and Cell Adhesion Molecules	19
VIII. Vasoactive Factors	23
IX. Summary and Future Directions	26
References	31

Fibroblast Growth Factors as Multifunctional Signaling Factors

Györgyi Szebenyi and John F. Fallon

I. Introduction	45
II. Structure, Regulation of Synthesis, Subcellular Localization, and Release of FGFs	47
III. FGF-Binding Proteins and Signaling Pathways	56
IV. The Biological Activities of FGFs	72

V. Concluding Remarks	85
References	87

Structural and Functional Characteristics of the Centrosome in Gametogenesis and Early Embryogenesis of Animals

Marina M. Krioutchkova and Galina E. Onishchenko

I. Introduction	107
II. Behavior of the Centrosome during Gametogenesis	110
III. Behavior of Centrioles and the Centrosome in Cells in Early Development and during Differentiation	122
IV. Conclusions	143
References	144

Cell and Molecular Biology of the Pars Tuberalis of the Pituitary

Werner Wittkowski, Jürgen Bockmann, Michael R. Kreutz, and Tobias M. Böckers

I. Introduction	157
II. Characteristics of Pars Tuberalis	158
III. Gene Expression of Pars Tuberalis-Specific Cells	165
IV. Biorhythmic Alterations	177
V. Physiological Significance: Pars Tuberalis as the Major "Zeitgeber" of Pars Distalis Activity?	182
VI. Concluding Remarks	186
References	187

Polarization of the Na⁺,K⁺-ATPase in Epithelia Derived from the Neuroepithelium

Lawrence J. Rizzolo

I. Introduction	195
II. Polarity and Transepithelial Transport	197
III. Plasticity: Remodeling Cell Polarity	202
IV. General Models for Epithelial Polarity	205
V. Diversity of Na ⁺ ,K ⁺ -ATPase Isoforms and Tissue Specificity	210
VI. Mechanisms That Polarize the Distribution of the Na ⁺ ,K ⁺ -ATPase	214

VII. Concluding Remarks	226
References	228

Desmosomes: Intercellular Adhesive Junctions Specialized for Attachment of Intermediate Filaments

Andrew P. Kowalczyk, Elayne A. Bornslaeger, Suzanne M. Norvell, Helena L. Palka,
and Kathleen J. Green

I. Introduction	237
II. Ultrastructural Properties and Tissue Distribution of Desmosomes	238
III. Transmembrane Components of the Desmosome: Desmosomal Cadherins	241
IV. Plaque Components of the Desmosome	248
V. Protein-Protein Interactions in the Desmosome: A Model for Desmosome Assembly	268
VI. Regulation of Desmosome Assembly	270
VII. Desmosomal Components in Signal Transduction and Development	278
VIII. Concluding Remarks	282
References	283
Index	303
