Contents

PREFACE	xiii
---------------	------

Protein Folding and Deficiencies Caused by Dominant-Negative Mutants of Hormones

PRISCILLA S. DANNIES

I. Introduction	2
II. Functions of the Endoplasmic Reticulum Related to Protein Folding ...	2
III. Aspects of the Neuroendocrine Secretory Pathway	11
IV. Isolated Dominant-Negative Hormone Deficiency: Problems in the Secretory Pathway	13
V. Conclusions	20
References	21

Structural Aspects of the G-Protein Receptor, Rhodopsin

ARLENE D. ALBERT AND PHILIP L. YEAGLE

I. Introduction	27
II. Seven Transmembrane Helical Hydrophobic Core of Rhodopsin	32
III. Structure of the Retinal and Its Binding Site in Rhodopsin	35
IV. Structure of Extramembranous Domains of Rhodopsin	36
V. Cytoplasmic Face of Rhodopsin	39
VI. Intradiskal Face of Rhodopsin	46
VII. Future Directions	46
References	47

Molecular Modeling of Mammalian Cytochromes *P450*: Application to Study Enzyme Function

GRAZYNA D. SZKLARZ, SANDRA E. GRAHAM, AND MARK D. PAULSEN

I. Introduction	54
II. Molecular Modeling Methods	56

III. Homology Models in Studies of <i>P</i> 450 Function	63
IV. Perspectives and Conclusions	80
References	83

Prostaglandin D Synthase: Structure and Function

YOSHIHIRO URADE AND OSAMU HAYAISHI

I. Introduction	90
II. Pharmacologic Actions of Prostaglandin D_2 and Its Metabolites	90
III. Lipocalin-Type Prostaglandin D Synthase (β -Trace)	93
IV. Hematopoietic Prostaglandin D Synthase	105
V. Future Studies	108
References	109

Steroid Dehydrogenase Structures, Mechanism of Action, and Disease

WILLIAM L. DUAX, DEBASHIS GHOSH, AND VLADIMIR PLETNEV

I. Introduction	122
II. $3\alpha,20\beta$ -Hydroxysteroid Dehydrogenase	125
III. Aldosterone, Cortisol, Licorice, and Hypertension	128
IV. 17β -Hydroxysteroid Dehydrogenase, Inhibitors, and Cancer	131
V. Protein Sequence and Three-Dimensional Conformation	139
VI. Conclusions	142
References	144

Structure-Based Inhibitor Design

SYDNEY P. CRAIG III AND ANN E. EAKIN

I. Introduction	150
II. Target Selection, Cloning, and Determination of 3-D Structures	152
III. Crystallographic Water Molecules	155
IV. Computational Approaches to Lead Compound Discovery	156
V. Estimating the Theoretical Limits for Reversible Inhibitor Binding	160

VI.	Connectivity, Flexibility, and Conformational Entropy	162
VII.	Using Enzyme Structures in Dealing with Resistance Mutations	164
VIII.	Conclusions	165
	References	166

Protein Folding Using Contact Maps

MICHELE VENDRUSCOLO AND EYTAN DOMANY

I.	Introduction	172
II.	Structure Representation	172
III.	The Reconstruction Procedure	175
IV.	Dynamics in Contact Map Space	183
V.	Approximation for Free Energy	189
VI.	Results	195
VII.	Conclusions	208
	References	209

HIV Protease: Enzyme Function and Drug Resistance

SERGEI GULNIK, JOHN W. ERICKSON, AND DONG XIE

I.	Introduction	214
II.	HIV PR Is a Member of the Aspartic Proteinase Family	216
III.	HIV PR Structure	216
IV.	Mechanism of the Substrate Cleavage and Protonation State of the Catalytic Aspartates	218
V.	Substrate Specificity	221
VI.	Assay Methods	222
VII.	pH Optima	224
VIII.	Dimer Stability	226
IX.	Thermodynamic Characteristics of Inhibitor Binding	228
X.	Inhibitors of HIV PR	228
XI.	Introduction to Resistance to HIV PR Inhibitors	230
XII.	Active Site Mutations	231
XIII.	Nonactive Site Mutations	233
XIV.	Cleavage Site Mutants	235
XV.	Reduced Dimer Stability	236
XVI.	Structural Basis of Drug Resistance	237
XVII.	Biochemical Basis of Viral Fitness	239
XVIII.	Cross-Resistance to Protease Inhibitors	243

XIX. Conclusions	244
References	245

Ultrastructure of Cells Undergoing Apoptosis

KENJI KIMURA, HIRONOBU SASANO, TOORU SHIMOSEGAWA,
SHIZUE MOCHIZUKI, HIROSHI NAGURA, AND TAKAYOSHI TOYOTA

I. Overview of Apoptosis	257
II. Ultrastructural Features of Cells Undergoing Apoptosis	258
III. Correlation between Ultrastructural and Biochemical Features of the Cells Undergoing Apoptosis	261
IV. Conclusion	265
References	265

Role of Cytoskeleton in Apoptosis

R. ATENCIA, A. ASUMENDI, AND M. GARCÍA-SANZ

I. Introduction	269
II. Actin Skeleton and Apoptosis	269
III. Intermediate Filaments	275
IV. Microtubules and Associated Proteins during Apoptosis	283
V. Cleavage of Monomeric Cytoskeletal Structures	289
VI. Conclusions	290
References	290

Dietary Antioxidants and Cardiovascular Disease

J. MICHAEL GAZIANO

I. Introduction	299
II. Basic Science—Oxidative Damage in Biological Systems	300
III. Role of Uncontrolled Oxidation in Atherogenesis	302
IV. Observational Epidemiology	305
V. Randomized Trials	310

VI. Conclusions	315
References	316

Melatonin Receptors and Ligands

PAULA A. WITT-ENDERBY AND PUI-KAI LI

I. Introduction	321
II. Structure-Affinity Relationships between Melatonergic Ligands with Melatonin Receptors	331
III. Complications Involved with Generalizing about Structure-Function Relationships of the Current Melatonin Receptor Ligands	346
IV. Conclusions	347
References	348

Vitamin K-Dependent Proteins

GARY L. NELSESTUEN, AMIT M. SHAH, AND STEPHEN B. HARVEY

I. Introduction	356
II. Synthesis of Gla	357
III. Blood Coagulation Cascade	359
IV. Inhibition of Blood Coagulation	362
V. Structural Design of Vitamin K-Dependent Plasma Proteins	364
VI. Structure-Function of the Gla Domain	365
VII. Role of Membrane Binding in Coagulation	373
References	379

Steroid/Nuclear Receptor Coactivators

J. DON CHEN

I. Introduction	392
II. Identification of SRC Coactivators	394
III. Interaction with Nuclear Receptors	399
IV. X-Ray Crystal Structures	405
V. Mechanism of Transactivation	417
VI. SRC Function and Specificity	426

VII. SRC Coactivators and Human Diseases 436
 VIII. Conclusions 441
 References 442

Thyroid Hormone Receptor, v-ErbA, and Chromatin

ALAN P. WOLFFE, TREVOR N. COLLINGWOOD, QIAO LI,
 JANET YEE, FYODOR URNOV, AND YUN-BO SHI

I. Introduction 450
 II. Thyroid Hormone Receptor as a Stable Component of Chromatin 452
 III. Transcriptional Coactivators and Corepressors for TR-RXR
 and v-ErbA That Modify Chromatin and Regulate Transcription 466
 IV. Insight into the Functional Roles of TR and v-ErbA in Development,
 Transformation, and Human Disease 476
 V. Conclusions 480
 References 481
