Whitehead Institute for Biomedical Research
Howard Hughes Medical Institute Research Laboratories
Cambridge, Massachusetts*

VOLUME 50

Protein Misassembly

EDITED BY

RONALD WETZEL

*University of Tennessee Medical Center
Knoxville, Tennessee*

ACADEMIC PRESS

San Diego London Boston New York
Sydney Tokyo Toronto

CONTENTS

PREFACE	ix
CHRISTIAN B. ANFINSEN	xiii

Protein Misassembly *in Vitro*

RAINER JAENICKE AND ROBERT SECKLER

I. Introduction	1
II. Protein Denaturation and Aggregation	2
III. Aggregation of Folding Intermediates	23
IV. Kinetic Partitioning between Folding and Aggregation	28
V. Protein Misassembly and Molecular Chaperones	34
VI. Suppressing Protein Misassembly during Protein Folding <i>in Vitro</i>	41
VII. Concluding Remarks	52
References	53

Oligomer Formation by 3D Domain Swapping: A Model for Protein Assembly and Misassembly

MICHAEL P. SCHLUNEGGER, MELANIE J. BENNETT, AND DAVID EISENBERG

I. Introduction	61
II. Definitions of 3D Domain Swapping	63
III. Examples of 3D Domain Swapping	65
IV. Energetics of 3D Domain Swapping	94
V. Roles of Amino Acid Sequence and Three-Dimensional Structure in 3D Domain Swapping	98
VI. Effects of Protein Environment on 3D Domain Swapping	103
VII. Protein Aggregation and 3D Domain Swapping: Can an Evolved Interface Lead to Pathological Function?	106
References	115

The Structure of Amyloid Fibrils by Electron Microscopy and X-Ray Diffraction

MARGARET SUNDE AND COLIN BLAKE

I.	Introduction to the Structural Characterization of Amyloid	123
II.	The Structural Hierarchy: Fibrils, Protofilaments, and Subprotofilaments	127
III.	The Development of the Cross- β -Model for Amyloid Structure	129
IV.	X-Ray Diffraction Studies of Amyloid Fibrils	131
V.	A Common Core Structure for Amyloid Fibrils	140
VI.	X-Ray Studies of Amyloidogenic Proteins	144
VII.	Biological Implications of the Structural Studies	153
	References	155

Transthyretin Quaternary and Tertiary Structural Changes Facilitate Misassembly into Amyloid

JEFFERY W. KELLY, WILFREDO COLON, ZHIHONG LAI, HILAL A. LASHUEL, JENNIFER MCCULLOCH, SANDRA L. McCUTCHEN, GRETA J. MIROY, AND SCOTT A. PETERSON

I.	Background and Introduction	161
II.	Understanding the Mechanism of Transthyretin Amyloid Fibril Formation <i>in Vitro</i> under Simulated Lysosomal Conditions	167
III.	Understanding the Mechanistic Basis by Which the FAP Mutations Function to Cause Early Onset Amyloid Disease	175
IV.	Therapeutic Strategies for Intervention in TTR Amyloid Disease	178
V.	Summary	178
	References	179

Domain Stability in Immunoglobulin Light Chain Deposition Disorders

RONALD WETZEL

I.	Introduction	183
II.	Possible Factors in Protein Deposition <i>in Vivo</i>	184

III. The Structural Basis of V _L Domain Folding	
Stability	193
IV. Light Chain Amyloidosis	205
V. Other Light Chain Aggregation Disorders	223
VI. Bacterial Inclusion Body Formation of Light Chain	
V _L Domains	230
VII. Conclusion	235
References	236

Mutational Effects on Inclusion Body Formation

SCOTT BETTS, CAMERON HAASE-PETTINGELL, AND JONATHAN KING

I. Introduction	243
II. Properties of Inclusion Bodies.	244
III. Protein Misfolding and Disease	247
IV. Product Loss in Industry, Protein Loss in	
Biomedical Research	247
V. Sequence Effects on Protein Aggregation <i>in Vitro</i>	248
VI. Inclusion Body Precursors and Pathways: Misassembly	
and Aggregation <i>in Vivo</i>	249
VII. Mutations That Affect Inclusion Body Formation	250
VIII. Aggregation versus Oligomerization	259
IX. Inclusion Body Formation, Chaperonin Function, and	
Novel Therapies	260
References	261
