ACADEMIC PRESS
San Diego London Boston New York
Sydney Tokyo Toronto

CONTENTS

INTRODUCTION ix

Electrostatic Contributions to Molecular Free Energies in Solution

MICHAEL SCHAEFER, HERMAN W. T. VAN VLIJMEN, AND MARTIN KARPLUS

I. Introduction 1
II. Theory and Calculational Methods 3
III. Applications 20
IV. Outlook 53
References 54

Site-Specific Analysis of Mutational Effects in Proteins

ENRICO DI CERA

I. Introduction 59
II. The Reference Cycle 61
III. Structural Mapping of Energetics 63
IV. Site-Specific Analysis of Mutational Effects in Proteins 73
V. Site-Specific Dissection of Thrombin Specificity . . 79
VI. Concluding Remarks 113
References 115

Allosteric Transitions of the Acetylcholine Receptor

STUART J. EDELSTEIN AND JEAN-PIERRE CHANGEUX

I. Introduction 121
II. Mechanistic Models 127
III. Recovery from Desensitization 133
IV. Kinetic Basis of Dose–Response Curves 137
V. Multiple Phenotypes 141
VI. Deductions from Single-Channel Measurements . . 149

VII. Allosteric Effectors and Coincidence Detection . . 163
VIII. General Considerations 166
References 173

Deciphering the Molecular Code of Hemoglobin Allostery

GARY K. ACKERS

I. Introduction 185
II. Overview 190
III. Binding Curves and Stoichiometric Information . . 198
IV. Site-Specific Aspects of Oxygen Binding 206
V. Experimental Determination of Site-Specific Cooperativity Terms 211
VI. How the Molecular Code Was Deciphered . . . 221
VII. Concluding Remarks 246
References 248

Statistical Thermodynamic Linkage between Conformational and Binding Equilibria

ERNESTO FREIRE

I. Introduction 255
II. The Most Probable Distribution 257
III. Coupling of Statistical Weights to Ligands . . . 257
IV. Modulation of Distribution of States by Specific Ligands 259
V. Modulation of Distribution of States by Denaturants 262
VI. Ligand-Induced Conformational Changes . . . 263
VII. The Distribution of Conformational States According to Their Gibbs Energy 263
VIII. Is the Unfolded State the State with the Highest Gibbs Energy? 267
IX. The Gibbs Energy Scale of Conformational States . . 269
X. Statistical Descriptors of the Conformational Ensemble 271
XI. Conclusions 278
References 278

Analysis of Effects of Salts and Uncharged Solutes on Protein and Nucleic Acid Equilibria and Processes: A Practical Guide to Recognizing and Interpreting Polyelectrolyte Effects, Hofmeister Effects, and Osmotic Effects of Salts

M. Thomas Record, Jr., Wentao Zhang, and Charles F. Anderson

I. Introduction 282
II. Overview of Concentration-Dependent Effects of Perturbing Solutes on Processes Involving Biopolymers 286
III. Preferential Interaction Coefficients as Fundamental Measures of Thermodynamic Effects due to Solute–Biopolymer Interactions 295
IV. Preferential Interactions of Nonelectrolyte Molecules with an Uncharged Biopolymer 303
V. Preferential Interactions of Electrolyte Ions with a Charged Biopolymer 311
VI. Use of Three-Component Preferential Interaction Coefficients to Analyze Effects of Solute Concentration on Equilibrium Constants, Transition Temperatures, or Free Energy Changes of Biopolymer Processes . . 319
VII. Two-Domain Predictions of Functional Forms of Effects of Nonelectrolyte Concentration on Equilibria (K_{obs}) and Transition Temperatures (T_m) of Uncharged Biopolymers in Aqueous Solution 326
VIII. Polyelectrolyte and Two-Domain Predictions of Functional Forms of Effects of Salt Concentration on Equilibria (K_{obs}) and Transition Temperatures (T_m) of Charged Biopolymers in Aqueous Solution . . . 330
IX. Conclusions and Future Directions 349
References 350

Control of Protein Stability and Reactions by Weakly Interacting Cosolvents: The Simplicity of the Complicated

Serge N. Timasheff

I. Introduction 356
II. Preferential Interactions 360
III. Wyman Linkages in Preferential Interactions . . . 377

IV. Linkage Control of Protein Stability 387
V. Linkage Control of Protein Reactions 409
VI. Sources of Exclusion 416
VII. Osmolytes 423
VIII. Conclusion 425
References 428
