Contents

SOME ARTICLES PLANNED FOR FUTURE VOLUMES	xi
--	----

Structural and Functional Characteristics of Dyrk, a Novel Subfamily of Protein Kinases with Dual Specificity

1

Walter Becker and Hans-Georg Joost

I. Introduction	2
II. Identification and Nomenclature of the Dyrk/Minibrain Family	2
III. Structural Comparison of the Dyrk Family Members and Definition of Common Characteristics	4
IV. Tissue Distribution, Alternative Splicing, and Polyadenylation of Dyrk mRNA	12
V. Genomic Localization of the Dyrk Kinases	13
VI. Enzymatic Characteristics of the Dyrk Family	13
VII. Potential Cellular Functions of the Dyrk Family of Protein Kinases ...	15
VIII. Future Perspectives	15
Note Added in Proof	16
References	16

Transcriptional and Posttranscriptional Regulation of Proteoglycan Gene Expression

19

Renato V. Iozzo and Keith G. Danielson

I. Overview and Scope	20
II. Transcriptional Regulation of Cell-Associated Proteoglycans	21
III. Regulation of the Basement Membrane Proteoglycan Perlecan	32
IV. Regulation of the Hyalectans, Proteoglycans Interacting with Hyaluronan and Lectin	35
V. Regulation of the Small Leucine-Rich Proteoglycans	42
VI. Conclusions and Prospects	48
References	48

Degradation of mRNA in *Escherichia coli*: An Old Problem with Some New Twists 55

Glen A. Coburn and George A. Mackie

I. Enzymes of mRNA Decay	57
II. Models for mRNA Decay	79
III. Paradigms for Selective mRNA Decay in <i>Escherichia coli</i>	96
IV. Epilogue	102
Note Added in Proof	103
References	103

Regulation of Mammalian Ribosomal Gene Transcription by RNA Polymerase I 109

Ingrid Grummt

I. rDNA Promoter Elements	111
II. Compounds of the Polymerase I Transcription Initiation Complex	113
III. RNA Polymerase I Holoenzyme Complex	125
IV. Species Specificity of Ribosomal Gene Transcription	128
V. Mechanisms of Pol I Transcriptional Regulation	129
VI. Effect of pRb on Pol I Transcription	135
VII. Activation of rDNA Transcription by SV40 Large T Antigen	136
VIII. Mitotic Repression of TIF-IB/SL1 Activity	137
IX. Topology of rDNA Transcription	138
X. Termination of Pol I Transcription	139
XI. Role of TTF-I in Chromatin Remodeling at the rDNA Promoter	144
XII. Role of TTF-I in Replication Fork Arrest	146
XIII. Conclusions and Perspectives	148
References	148

The Initiation of DNA Base Excision Repair of Dipyrimidine Photoproducts 155

R. Stephen Lloyd

I. Discovery of Enzymes That Initiate Repair of Major Ultraviolet Photoproducts	156
II. Protein-DNA Interactions Preceding Catalysis	159
III. Determination of the First Active Site of a DNA Glycosylase/AP Lyase	164
IV. Conclusions and Applications	171
References	172

Domain Organization, Genomic Structure, Evolution, and Regulation of Expression of the Aggrecan Gene Family 177

Nancy B. Schwartz, Edward W. Pirok III,
James R. Mensch, Jr., and Miriam S. Domowicz

I. Aggrecan Gene Family	178
II. cDNA Cloning and Domain Structure	187
III. Gene Structure and Organization	197
IV. Promoter Analysis and Regulation of Expression	204
V. Evolution and Relation to Other Genes	209
VI. Chromosomal Localization and Gene Mutations	217
VII. Summary and Perspective	220
References	221

Modulation of DNA Damage and DNA Repair in Chromatin 227

Michael J. Smerdon and Antonio Conconi

I. Modulation of DNA Damage by Chromatin Structure	228
II. Modulation of Chromatin Structure by DNA Damage	235
III. Modulation of DNA Repair in Chromatin	238
IV. Modulation of Chromatin Structure during DNA Repair	244
V. Concluding Remarks	251
References	252

The Search for Trans-Acting Factors Controlling Messenger RNA Decay 257

Gerald M. Wilson and Gary Brewer

I. Rapid mRNA Turnover Mediated by A + U-Rich Elements	260
II. Approaches to Identification of Trans-Acting RNA-Binding Factors	264
III. The A + U-Rich Element RNA-Binding Protein, AUF1	268
IV. Involvement of AUF1 in Control of A + U-Rich Element-Mediated mRNA Turnover	277
V. Other Proteins Binding A + U-Rich Elements	284
VI. Summary	287
References	288

Regulation of RNA Polymerase I Transcription in Yeast and Vertebrates 293

Ronald H. Reeder

I. Biology of Ribosomal RNA Transcription	293
II. Pol I Transcriptional Machinery	298
III. Regulatory Mechanisms	309
IV. Conclusions	321
References	322

Regulation of the *Bacillus subtilis* Pyrimidine Biosynthetic Operon by Transcriptional Attenuation: Control of Gene Expression by an mRNA-Binding Protein 329

Robert L. Switzer, Robert J. Turner, and Yang Lu

I. Introduction	330
II. Repression and Structure of the <i>Bacillus subtilis pyr</i> Operon	331
III. A Model of PyrR-Dependent Attenuation of Transcription of the <i>pyr</i> Operon	333
IV. Evidence for Attenuation at Three Sites in the <i>pyr</i> Operon	337
V. Evidence for the Roles of the Antiterminator and Terminator Structures	337
VI. Evidence for a Central Role for PyrR	339
VII. PyrR Controls Cessation of <i>pyr</i> Expression at the Onset of Sporulation	340
VIII. Properties of Purified PyrR	341
IX. How Does PyrR Recognize and Bind to RNA?	351
X. Questions for the Future	356
XI. PyrR-Dependent Regulation of <i>pyr</i> Genes in Other Bacteria	358
XII. Transcriptional Attenuation as a General Control Mechanism in Bacteria	362
References	364

DNA Damage and Replication Checkpoints in the Fission Yeast, *Schizosaccharomyces pombe* 369

Joel A. Huberman

I. Overview of Replication and Damage Checkpoints in <i>Schizosaccharomyces pombe</i>	371
II. Definitions of Checkpoint and Damage Response Pathways	373

III. The G ₂ -M Checkpoint Pathway(s)	375
IV. DNA Damage Tolerance	382
V. The S _{entry} -M, S _{dNTP} -M, and S _{DNApol} -M Checkpoint Pathways and S-Phase Recovery	383
VI. The G ₁ -M Checkpoint Pathway	390
VII. The Intra-S-Phase Checkpoint	390
VIII. Final Comments	393
References	393
INDEX	397
