Contents

SOME ARTICLES PLANNED FOR FUTURE VOLUMES	ix
--	----

The Molecular Biology of Cyclic Nucleotide Phosphodiesterases	1
---	---

Marco Conti and S.-L. Catherine Jin

I. Introduction	2
II. Nomenclature	3
III. Overview of the Domain Organization of a Cyclic Nucleotide Phosphodiesterase	4
IV. Structure of the Genes Encoding Phosphodiesterases	8
V. Localization of the Phosphodiesterase Genes in the Human Genome and Association with Inherited Diseases	12
VI. Transcription Regulation of Phosphodiesterase Genes	14
VII. Regulation of mRNA Stability	18
VIII. Alternate Splicing and Function of PDE Variants	19
IX. Concluding Remarks	31
References	33

PriA: At the Crossroads of DNA Replication and Recombination	39
--	----

Kenneth J. Marians

I. Discovery and Initial Characterization	40
II. Helicase Activity and Primosome Function	44
III. Cloning and Structure-Function Analysis	48
IV. Characterization of <i>priA</i> Null Strains	51
V. PriA Binding to D Loops	58
VI. Replication Fork Assembly at D Loops	61
VII. Conclusions	62
References	64

The Cell Biology of the Prohormone Convertases PC1 and PC2	69
L. Muller and I. Lindberg	
I. Prohormone Processing—General Features	70
II. The Cell Biology of PC1	73
III. The Cell Biology of PC2 and Its Binding Protein 7B2	80
IV. Are There Other 7B2-like Molecules in the Secretory Pathway?	100
V. Summary and Perspective: Future Research	102
References	103
Transcriptional Regulation of Syndecan-1 Expression by Growth Factors	109
Panu Jaakkola and Markku Jalkanen	
I. Structure of Syndecan-1	110
II. Functions of Syndecan-1	111
III. Expression of Syndecan-1	113
IV. Regulation of Syndecan-1 Expression	115
V. Growth Factor-Induced Transcriptional Regulation of Syndecan-1 by a Novel FGF-Inducible Response Element	118
VI. Discussion	128
References	134
Retinoic Acid: Its Biosynthesis and Metabolism	139
Joseph L. Napoli	
I. Approaches to Identifying Enzymes That Catalyze Retinoid Metabolism	140
II. Retinoid-Binding Proteins	141
III. Effects of Retinoid-Binding Proteins on Enzyme Access to Retinoids	146
IV. A Model of Retinoic Acid Metabolic Homeostasis	152
V. Retinyl Ester Hydrolase	159
VI. Lecithin:Retinol Acyltransferase	160
VII. Retinol Dehydrogenases	160
VIII. Retinoid–Androgen Interactions	167
IX. Retinal Dehydrogenases	170
X. Retinoic Acid Metabolism	174
XI. Do Alcohol Dehydrogenases Function Universally in Retinoic Acid Biosynthesis?	177

XII. Does Ethanol Cause Fetal Alcohol Syndrome by Competitive Inhibition of Retinol Dehydrogenation?	180
References	182

Genetic Disorders Associated with Cancer Predisposition and Genomic Instability

Carina J. Vessey, Christopher J. Norbury,
and Ian D. Hickson

I. Introduction	190
II. Genomic Instability: A Universal Aspect of Early Tumorigenesis?	213
References	214

The Role of POU Domain Proteins in the Regulation of Mammalian Pituitary and Nervous System Development

Robert J. McEvilly and Michael G. Rosenfeld

I. Introduction	224
II. Class I POU Domain Proteins	225
III. Class III POU Domain Proteins	228
IV. Class IV POU Domain Proteins	239
V. Discussion	247
References	251

DNA Repair and Chromatin Structure in Genetic Diseases

Muriel W. Lambert and W. Clark Lambert

I. Introduction	258
II. DNA Endonuclease Complexes	260
III. Activity of Endonuclease Complexes on Damaged Naked DNA	263
IV. DNA Damage-Recognition Proteins	277
V. Activity of Endonuclease Complexes on Damaged Nucleosomal DNA	281
VI. Correction of the XP Repair Defect at the Cellular and Nucleosomal Levels	290
VII. Mechanism of Location of Sites of Damage	291
VIII. Models for the Repair Defect in XPA Cells	299

IX. Conclusions	300
References	302
Recombinational DNA Repair in Bacteria and the RecA Protein	311
Michael M. Cox	
I. Recombinational DNA Repair in Bacteria	312
II. The RecA Protein	331
III. Summary and Prospects	357
References	357
A Survey of the Sequence-Specific Interaction of Damaging Agents with DNA: Emphasis on Antitumor Agents	367
Vincent Murray	
I. Introduction and Short History	368
II. Methods for Determining the Sequence Specificity of DNA-Damaging Agents	370
III. Survey of the Sequence Specificity of DNA-Damaging Agents	377
IV. Sequence Specificity Issues	402
V. Summary and Future Prospects	405
References	407
INDEX	417
