Contents

SOME ARTICLES PLANNED FOR FUTURE VOLUMES	ix
--	----

Cyclic Nucleotide Phosphodiesterases: Relating Structure and Function 1

Sharron H. Francis, Illarion V. Turko, and Jackie D. Corbin

I. Introduction	2
II. Background	3
III. Classification	3
IV. Structural Features of PDEs	5
V. Features of Catalysis	8
VI. Mechanisms Utilized for Regulation of PDEs	18
VII. PDE Families	20
VIII. Concluding Remarks	41
References	41

Thyroid Hormone Regulation of Apoptotic Tissue Remodeling: Implications from Molecular Analysis of Amphibian Metamorphosis 53

Yun-Bo Shi and Atsuko Ishizuya-Oka

I. Introduction	54
II. Thyroid Hormone and Vertebrate Development	55
III. Mechanism of Thyroid Hormone Action	58
IV. Thyroid Hormone-Dependent Morphological and Cellular Changes during Intestinal Remodeling	70
V. TR Expression and Function during Intestinal Remodeling	77
VI. Thyroid Hormone Response Genes in the Intestine	80
VII. Functions of TH Response Genes: Implication from Studies on Matrix Metalloproteinases	84
VIII. Conclusions and Prospects	91
References	94

Role of S6 Phosphorylation and S6 Kinase in Cell Growth 101

Siniša Volarević and George Thomas

I. 40S Ribosomal Protein S6	103
II. S6 Kinase	108
III. Downstream Effectors of S6K	117
IV. Physiological Importance	119
V. Future Perspectives	122
References	123

Molecular Characterization of Monoamine Oxidases A and B 129

Creed W. Abell and Sau-Wah Kwan

I. Gene Cloning and Structure	131
II. Functional Regions of MAO B	135
III. Tissue and Cell Distribution	149
IV. Physiological Functions	150
V. Future Perspectives	152
References	152

Squalene Synthase: Structure and Regulation 157

Terese R. Tansey and Ishaiahu Shechter

I. History of SQS Research	159
II. Purification of Rat SQS	161
III. Intracellular Location of SQS	163
IV. Isolation of Mammalian SQS cDNA Clones	164
V. Reaction Mechanism	166
VI. Identification of Functional Domains in SQS	166
VII. SQS Genes and mRNAs	174
VIII. SQS Regulation	177
References	191

Yeast Chromatin Structure and Regulation of GAL Gene Expression 197

R. Bash and D. Lohr

I. Yeast Genomic-Level Chromatin Structure	198
II. Yeast GAL Gene Regulation	214

III. <i>GAL</i> Gene-Specific Chromatin Structure	223
References	254

A Coordinated Interplay: Proteins with Multiple Functions in DNA Replication, DNA Repair, Cell Cycle/Checkpoint Control, and Transcription

261

Manuel Stucki, Igor Stagljar, Zophonias O. Jónsson,
and Ulrich Hübscher

I. DNA Polymerases	263
II. DNA Polymerase Accessory Proteins	279
III. Transcription Factors and Their Role in Activation of DNA Replication	286
IV. Perspectives and Conclusions	291
References	292

Signal Transduction Pathways and the Modification of Chromatin Structure

299

James R. Davie and Virginia A. Spencer

I. Chromatin Organization	300
II. Core Histone Tails	302
III. Transcriptionally Active Chromatin	303
IV. Histone Variants and Modifications	305
V. Karyoskeleton and Organization of Chromatin	326
VI. Karyoskeleton and Transcription Factories	327
VII. Transcriptionally Active Chromatin and the Karyoskeleton	327
VIII. Transcription Factors and the Karyoskeleton	328
IX. HATs, HDACs, and the Karyoskeleton	329
X. Mechanical Signaling Pathways and Organization of Nuclear DNA ...	329
XI. Future Directions	331
References	332

RGS Proteins: Lessons from the RGS9 Subfamily

341

Christopher W. Cowan, Wei He, and Theodore G. Wensel

I. Discovery of Photoreceptor GAP and RGS Protein Family	342
II. Some Outstanding Problems in RGS Protein Function and Structure	344
III. Contributions to Solving These Problems from RGS9 and Its Subfamily of RGS Proteins	349

IV. Future Prospects	355
References	356
Regulation of Mammalian Cell Membrane Biosynthesis	361
Athanasios Lykidis and Suzanne Jackowski	
I. Introduction	362
II. Regulation of Phosphatidylcholine Biosynthesis	364
III. Regulation of Phosphatidylethanolamine Biosynthesis	374
IV. Regulation of Phosphatidylinositol Biosynthesis	376
V. Regulation of a Phosphatidylserine Biosynthesis	379
VI. Cells Maintain a Constant Amount of Membrane Phospholipid	380
VII. Inhibition of Phosphatidylcholine Biosynthesis Induces Apoptosis	382
VIII. Future Directions	386
References	388
INDEX	395
