

ADVANCES IN CANCER RESEARCH

Edited by

GEORGE F. VANDE WOUDE

ABL-Basic Research Program
NCI-Frederick Cancer Research and Development Center
Frederick, Maryland

GEORGE KLEIN

Department of Tumor Biology
Karolinska Institutet
Stockholm, Sweden

Volume 62

ACADEMIC PRESS, INC.

A Division of Harcourt Brace & Company

San Diego New York Boston

London Sydney Tokyo Toronto

CONTENTS

CONTRIBUTORS TO VOLUME 62 ix

Foundations in Cancer Research—Chromosomes and Cancer: The Evolution of an Idea

PETER C. NOWELL

I. Introduction	1
II. Boveri and Early Studies (Before 1950)	1
III. The Stemline Concept and Modern Cytogenetics (the 1950s)	3
IV. Early Findings in the Pre-banding Era (the 1960s)	5
V. Chromosome Banding and Clonal Evolution (the 1970s)	7
VI. Molecular Cytogenetics (the 1980s)	10
VII. Conclusions	14
References	14

Pathways of Ras Function: Connections to the Actin Cytoskeleton

GEORGE C. PRENDERGAST AND JACKSON B. GIBBS

I. Introduction	19
II. Ras Guanine Nucleotide Exchange Factors	20
III. GAP and GAP-Associated Proteins	29
IV. Signal Transduction Pathways Downstream of Ras	35
V. Perspectives on Ras Function	46
References	52
Note Added in Proof	64

The Role of the Adenomatous Polyposis Coli (*APC*) Gene in Human Cancers

YUSUKE NAKAMURA

I. Identification of the <i>APC</i> Gene	65
II. Germline Mutations of the <i>APC</i> Gene in Familial Adenomatous Polyposis Patients	66
III. Somatic Mutations of the <i>APC</i> Gene in Colorectal Tumors	74
IV. Somatic Mutations of the <i>APC</i> Gene in Other Human Cancers	80
References	83

Molecular Cytogenetics of Renal Cell Tumors

GYULA KOVACS

I. Introduction	89
II. Differential Genetics of Renal Cell Tumors	90
III. Genetics of Nonpapillary Renal Cell Carcinomas	91
IV. Genetics of Papillary Renal Cell Tumors	105
V. Renal Oncocytoma	115
VI. Chromophobe Renal Cell Carcinoma	117
VII. Conclusions	118
References	119

Reverse Transformation, Genome Exposure, and Cancer

THEODORE T. PUCK AND ALPHONSE KRYSOSEK

I. Introduction	125
II. Review of Reverse Transformation (Redifferentiation)	126
III. The Genome Exposure Defect in Cancer	127
IV. Restoration of Genome Exposure in Transformed Cells	132
V. Differentiation Induction in Malignant Cells as Reverse Transformation	133
VI. Relationship to Other Work on DNase I Sensitivity	135
VII. Theoretical Formulation about Signal Transduction Mechanisms Governing Genome Exposure	139
VIII. Further Unsolved Problems and Some Experimental Predictions of the Model	143
IX. Therapeutic and Preventative Significance	145

X. Summary	147
References	147

Peptide-Binding Heat Shock Proteins in the Endoplasmic Reticulum: Role in Immune Response to Cancer and in Antigen Presentation

PRAMOD K. SRIVASTAVA

I. The Curious Paradox of Heat Shock Proteins as Tumor-Specific Antigens	154
II. Hypothesis That HSPs Chaperone Antigenic Peptides	160
III. Evidence in Support of the Hypothesis	160
IV. Mechanisms by Which HSPs Elicit Specific Immunity	167
V. Implications for Immunity to Cancer	167
VI. Implications for Antigen Presentation	172
References	175

The Association of Epstein-Barr Virus (EBV) with T Cell Lymphoproliferations and Hodgkin's Disease: Two New Developments in the EBV Field

GORM PALLESEN, STEPHEN J. HAMILTON-DUTOIT,
AND XIAOGE ZHOU

I. Introduction	180
II. Biology of EBV	181
III. Detection of EBV Markers in Tissues	184
IV. EBV and T Cell Lymphoproliferations	187
V. EBV and Hodgkin's Disease	212
References	231

The Role of Direct Cellular Communication during the Development of a Humoral Immune Response

E. CHARLES SNOW AND RANDOLPH J. NOELLE

I. Introduction	241
II. Contributions of Lymphoid Tissue Architecture	242
III. Activation of Th Cells	245

IV. Activation of Naive B Cells	246
V. Th Cell Regulation of Follicular B Cell Survival	256
VI. Th Cell Regulation of B Cell Isotype Switching	259
VII. Conclusions	260
References	261
INDEX	267
