# Advances in **CANCER RESEARCH**

---

Volume 72

Edited by

**George F. Vande Woude**

*ABL-Basic Research Program  
National Cancer Institute  
Frederick Cancer Research and Development Center  
Frederick, Maryland*

**George Klein**

*Microbiology and Tumor Biology Center  
Karolinska Institutet  
Stockholm, Sweden*

**ACADEMIC PRESS**

San Diego London Boston  
New York Sydney Tokyo Toronto

Contributors to Volume 72 ix

## FOUNDATIONS IN CANCER RESEARCH

### **Foulds' Dangerous Idea Revisited: The Multistep Development of Tumors 40 Years Later**

George Klein

- I. Foulds' Rules 2
- II. Oncogenetics 3
- III. Other Destabilizing Mutations Caused by Loss of DNA  
Repair Functions 11
- IV. Molecular Biology of Multistep Carcinogenesis 14
- V. Strong Selective Pressures Favor Multiple Escapes 17
- VI. Conclusion 19
- References 20

## FOUNDATIONS IN CANCER RESEARCH

### **Cancer Cells Exhibit a Mutator Phenotype**

Lawrence A. Loeb

- I. Introduction 26
- II. Historical Perspective 28
- III. Requirements for a Mutator Phenotype 32
- IV. Origins of Mutations 36
- V. Candidate Target Mutator Genes 38
- VI. Microsatellite Instability 43
- VII. Theoretical and Practical Considerations 47
- VIII. Summary and Perspectives 51
- References 52

## **Increasing Complexity of Ras Signal Transduction: Involvement of Rho Family Proteins**

Roya Khosravi-Far, Sharon Campbell, Kent L. Rossman, and Channing J. Der

- I. Introduction 57
- II. Ras Is a Point of Convergence for Diverse Extracellular Signal-Stimulated Pathways 60
- III. Ras Activation of Raf-Independent Pathways Contributes to Ras Transformation 65
- IV. Ras Mediates Its Actions through Interaction with Multiple Effectors 69
- V. Ras Activation of a GTPase Cascade: An Involvement of Rho Family Proteins in Transformation 78
- VI. Rho Family Proteins Mediate Their Actions through Interaction with Multiple Effectors 85
- VII. A Search for the Missing Link between Ras and Rho Family Proteins 95
- VIII. Increasing Complexity of Ras Signal Transduction: A Boon or Bust for Drug Discovery and the Development of Anti-Ras Drugs for Cancer Treatment? 96
- IX. Future Directions 97
- References 99

## **B-Myb: A Key Regulator of the Cell Cycle**

Mark K. Saville and Roger J. Watson

- I. Introduction 109
- II. B-Myb Structure and Functional Domains 111
- III. Transcriptional Regulation of B-*myb* 115
- IV. Modification of B-Myb Protein in the Cell Cycle 123
- V. The Requirement for B-Myb in Cell Proliferation 127
- VI. B-Myb Function 132
- References 137

## **Alterations in DNA Methylation: A Fundamental Aspect of Neoplasia**

Stephen B. Baylin, James G. Herman, Jeremy R. Graff, Paula M. Vertino, and Jean-Pierre Issa

- I. Introduction 142
- II. Brief History of DNA Methylation in Eukaryotes 142
- III. The Normal Roles for Cytosine Methylation in Higher Order Eukaryotes 144
- IV. Abnormalities of DNA Methylation in Neoplasia 150
- V. Mechanisms Underlying the DNA Methylation Changes in Neoplastic Cells 167
- VI. An Overview of Tumor Progression That Incorporates the Roles of Altered DNA Methylation 186
- VII. Clinical Implications of Altered DNA Methylation in Cancer 189
- References 190

**Ara-C: Cellular and Molecular Pharmacology**

Steven Grant

I. Introduction	198
II. Structure	200
III. Metabolism	200
IV. Mechanisms of Cytotoxicity	205
V. Mechanism of Resistance	210
VI. Signaling Pathways and Oncogene Interactions	213
VII. Modulation of ara-C Associated Toxicity	220
VIII. Conclusions	225
References	225

Index	235
