# Contents

<i>List of abbreviations</i> . . . . .	7
<i>Chapter 1. Introduction</i> . . . . .	8
<i>Chapter 2. Methods of cell breakage: assessing their suitability and efficacy</i> . . . . .	11
2.1. Apparatus and techniques . . . . .	12
2.1.1. Potter-Elvehjem homogenisers . . . . .	12
2.1.2. Dounce homogenisers . . . . .	16
2.1.3. Microhomogenisers . . . . .	16
2.1.4. Pressure homogenisation (gas cavitation) . . . . .	17
2.1.5. Cell rupturing pumps . . . . .	21
2.1.6. Tissue presses . . . . .	23
2.1.7. Sonication . . . . .	26
2.1.8. Tissue homogenisers, e.g., 'Polytron' 'Ultraturrax' machines . . . . .	27
2.2. Media . . . . .	29
2.2.1. Hypo-osmotic media . . . . .	30
2.2.2. Medium pH . . . . .	31
2.3. Special conditions . . . . .	32
2.3.1. Solid tissues . . . . .	32
2.3.2. Isolated cells . . . . .	33
2.3.3. Fragile cells . . . . .	34
2.3.4. Chemical fixation of membranes to minimise fragmentation . . . . .	35
2.3.5. Use of inhibitors of proteases and ribonucleases . . . . .	36
2.4. Assessment of efficacy of homogenising conditions . . . . .	36
2.4.1. Brain tissue . . . . .	37
2.4.2. Lymphocytes . . . . .	38
2.4.3. Liver tissue . . . . .	38
2.4.4. Brush borders of columnar epithelial cells . . . . .	41
2.4.5. Murine fibroblasts - effects of pretreatment . . . . .	43

<i>Chapter 3. General methods for the preparation of plasma membranes . . . . .</i>	<i>45</i>
3.1. Separation of membranes by centrifugation . . . . .	45
3.1.1. Differential centrifugation . . . . .	47
3.1.2. Centrifugation in density gradients . . . . .	49
3.1.3. Continuous and discontinuous density gradients . . . . .	49
3.1.4. Construction and unloading of gradients . . . . .	51
3.1.5. Selection of gradient materials . . . . .	53
3.1.6. Separation parameters of the major subcellular organelles and membrane systems . . . . .	54
3.1.7. Theoretical parameters determining particle density . . . . .	59
3.1.8. Use of zonal rotors to prepare plasma membrane fractions . . . . .	61
3.1.9. Plasma membrane density perturbation . . . . .	64
3.1.10. Perturbation of the density of intracellular components . . . . .	69
3.1.11. Combined affinity – density perturbation approaches . . . . .	70
3.2. Separation of membranes in liquid-polymer phase systems . . . . .	71
3.3. Plasma membrane isolation using immunoabsorbents . . . . .	76
3.4. Free-flow electrophoretic separation of membranes . . . . .	78
3.5. Membrane separation by chromatography on columns of glass beads . . . . .	86
3.6. Preparation of right-side-out (RSO) and inside-out (IO) plasma membrane vesicles . . . . .	87
3.7. Removal of non-membraneous protein from isolated fractions . . . . .	89
3.8. Conditions for storage of plasma membranes . . . . .	91
 <i>Chapter 4. Identification of subcellular fractions, especially those containing plasma membranes . . . . .</i>	 <i>93</i>
4.1. General features . . . . .	93
4.1.1. Latency of plasma membrane markers . . . . .	95
4.1.2. Yield of plasma membranes . . . . .	96
4.1.3. Expression of results . . . . .	100
4.1.4. Other practical considerations in determining membrane marker components . . . . .	102
4.2. Enzymic markers and their estimation . . . . .	103
4.2.1. Plasma membrane enzymic markers . . . . .	103
4.2.1.1. 5'-Nucleotidase . . . . .	103
4.2.1.2. Alkaline phosphodiesterase and nucleotide pyrophosphatase . . . . .	105
4.2.1.3. Nucleotide triphosphatases . . . . .	107
4.2.1.4. Leucyl-naphthylamidase . . . . .	108
4.2.1.5. Nucleotide cyclases . . . . .	108
4.2.1.6. Tissue-specific markers . . . . .	112
4.2.2. Endoplasmic reticulum markers . . . . .	114
4.2.3. Golgi membrane markers . . . . .	116
4.2.4. Mitochondrial markers . . . . .	117

4.2.5. Lysosomal markers . . . . .	119
4.2.6. Nuclear membrane (envelope) markers . . . . .	120
4.2.7. Cytoplasmic marker enzymes . . . . .	121
4.3. Chemical markers . . . . .	121
4.3.1. Sialic acids . . . . .	121
4.3.2. Phospholipids . . . . .	123
4.3.3. Cholesterol . . . . .	125
4.3.4. Ribonucleic acid . . . . .	126
4.3.5. Deoxyribonucleic acid . . . . .	127
4.3.6. Estimation of membrane protein . . . . .	127
4.3.7. Estimation of phosphate . . . . .	128
4.3.8. Analysis of membranes by polyacrylamide gel electrophoresis . . . . .	128
4.3.8.1. Solubilisation of membranes . . . . .	129
4.3.8.2. Operation of various gel systems . . . . .	130
4.3.8.3. Choice of detergents . . . . .	136
4.3.8.4. Post-electrophoretic staining of constituents . . . . .	136
4.3.8.5. Autoradiography of gels: direct or by fluorography . . . . .	140
4.3.8.6. Molecular weights of membrane proteins . . . . .	141
4.3.8.7. Isoelectrofocusing of membranes . . . . .	144
4.4. Antigenic markers . . . . .	145
4.5. Morphological markers . . . . .	147
4.5.1. Outer mitochondrial vesicles . . . . .	147
4.5.2. Nuclear envelope components . . . . .	147
4.5.3. Golgi apparatus components . . . . .	148
4.5.4. Filamentous structures attached to membranes . . . . .	148
4.5.5. Plasma membrane specialisations . . . . .	151
4.5.6. Morphometric techniques . . . . .	153
4.6. Radioactivity as a plasma membrane marker . . . . .	155
4.6.1. Enzymically-catalysed radio-labelling of plasma membranes . . . . .	155
4.6.1.1. Catalysis by galactose oxidase . . . . .	155
4.6.1.2. Catalysis by lactoperoxidase . . . . .	156
4.6.2. Biosynthetically-incorporated plasma membrane markers . . . . .	162
4.6.3. Radio-labelled ligands as plasma membrane markers . . . . .	168
4.6.3.1. Practical considerations in the selection and use of radioactively-labelled ligands . . . . .	170
4.6.3.2. Iodination of ligands: comparison of enzymic and chemical methods . . . . .	172
4.6.3.3. Comparison of the binding properties of various ligands . . . . .	174
4.6.3.4. Domain-specific plasma membrane-labelling . . . . .	174
4.7. Fluorescent probes as plasma membrane markers . . . . .	175

*Chapter 5. Preparation of plasma membranes from certain tissues and cell lines . . . . . 177*

5.1. Liver plasma membranes . . . . .	177
5.1.1. Lateral and bile canalicular plasma membranes . . . . .	178

5.1.2. Blood sinusoidal plasma membranes . . . . .	179
5.1.3. Plasma membranes from hepatoma . . . . .	182
5.1.4. Plasma membranes from isolated hepatocytes . . . . .	182
5.2. Central nervous system plasma membranes . . . . .	183
5.2.1. Synaptosomal plasma membranes . . . . .	184
5.3. Plasma membranes from kidney . . . . .	194
5.3.1. Brush border plasma membranes . . . . .	195
5.3.2. Brush border microvilli . . . . .	196
5.3.3. Basolateral plasma membranes . . . . .	197
5.3.4. Kidney medulla plasma membranes . . . . .	198
5.4. Intestinal epithelial brush border and baso-lateral plasma membranes . . . . .	199
5.5. Plasma membranes from lymphocytes . . . . .	200
5.6. Plasma membranes from cultured cells . . . . .	203
5.6.1. Plasma membranes from various cultured cell lines . . . . .	204
5.6.2. Maintaining the intactness of plasma membrane 'ghosts' . . . . .	209
5.6.3. Preparation of plasma membrane micro-vesicles . . . . .	211
5.6.4. Preparation of plasma membranes by use of latex-bead ingestion . . . . .	212
5.6.5. Enzymic and chemical heterogeneity of plasma membranes . . . . .	212
5.7. Endocrine tissue plasma membranes . . . . .	213
5.8. Muscle tissue plasma membranes . . . . .	216
5.9. Preparation of plasma membrane junctional specialisations . . . . .	217
5.9.1. Gap communicating junctions . . . . .	218
5.9.2. Desmosomes . . . . .	220
5.9.3. Synaptic junctions . . . . .	221

<i>Appendix 1. Some properties of aqueous sucrose and Ficoll solutions . . . . .</i>	<i>223</i>
