<i>List of Contributors</i>	xix
<i>Abbreviations</i>	xxi
<b>1. Protein molecular weight determination by sodium dodecyl sulfate polyacrylamide gel electrophoresis</b>	<b>1</b>
<i>Gregory S. Makowski and Melinda L. Ramsby</i>	
<b>1. Introduction</b>	<b>1</b>
<b>2. Principles and theory</b>	<b>1</b>
<b>3. Components of SDS-PAGE</b>	<b>2</b>
Polyacrylamide	2
Sodium dodecyl sulfate	3
Multiphasic buffers	4
<b>4. Performing SDS-PAGE</b>	<b>5</b>
Slab SDS-PAGE	6
Preparation of SDS-PAGE gels	7
Staining the gel	12
Calibration proteins and mol. wt determination	13
<b>5. Factors affecting SDS-PAGE</b>	<b>15</b>
Effect of polyacrylamide concentration	15
Effect of cross-linker concentration	17
Effect of resolving gel pH	17
Effect of sample volume	20
Effect of sample reduction	20
<b>6. Additional SDS-PAGE systems</b>	<b>21</b>
Gradient gels	21
Other gels	21
<b>7. Enzyme activity determination in gels</b>	<b>21</b>
Gelatin zymography	21
Overlay techniques	23
Enzyme elution into free solution	25
<b>8. Additional SDS-PAGE applications</b>	<b>25</b>
Western blotting	25
Preparation of antigens	25
Radiolabelled proteins	25

## Contents

<b>9. Troubleshooting</b>	25
Gels fail to polymerize	25
Electrophoresis time too long	26
Poorly resolved/smeared protein bands	26
Uneven/diffuse dye front migration	26
References	26
<b>2. Protein analysis by mass spectrometry</b>	29
<i>Ole Nørregaard Jensen, Andrej Shevchenko, and Matthias Mann</i>	
<b>1. Introduction</b>	29
<b>2. Mass spectrometry</b>	30
Generating gas phase molecular ions	30
Mass analysis of molecular ions	31
Tandem mass spectrometry	31
<b>3. When and how to use mass spectrometry for protein and peptide characterization</b>	32
<b>4. Sample preparation for mass spectrometry</b>	33
Sample purity—a mass spectrometrists' point of view	33
Solvents used in mass spectrometry	34
Interfacing chromatographic separation methods to an electrospray mass spectrometer	39
Sample preparation for nanoelectrospray MS	40
<b>5. Interpretation of mass spectra</b>	40
<b>6. Mass analysis of intact proteins</b>	42
<b>7. Peptide mass mapping</b>	43
Software that aids the interpretation of mass spectra	44
Protein identification	47
<b>8. Peptide sequencing by tandem mass spectrometry</b>	50
<b>9. Strategies for the analysis of modified proteins: phosphoproteins and peptides</b>	53
Acknowledgements	54
Appendix	54
References	56
<b>3. Immunological detection of proteins of known sequence</b>	59
<i>Karl Heinz Scheidtmann, Silke Reinartz, and Harald Schlebusch</i>	
<b>1. Introduction</b>	59

## Contents

2. Generation of specific antibodies	60
3. Antibodies against synthetic peptides	60
Criteria for selection of peptides	60
Coupling of peptide to carrier protein	62
4. Antibodies against bacterially expressed proteins	65
Purification of fusion protein from bacteria	65
5. Immunization	67
6. Generation of recombinant antibody fragments in bacteria through recombinant phage	67
7. Testing antisera	72
ELISA	72
Testing for antibodies recognizing the protein	73
8. Detection of proteins in cell extracts	73
Preparation of whole cell extracts	73
Preparation of 'soluble' cell extracts	74
Extraction of nuclei	76
Opening cells by 'Douncing'	77
Cell fractionation	77
Radiolabelling of cells	78
9. Evaluation of detection methods	79
Western blotting	79
Immunoprecipitation	82
10. Detection of proteins <i>in situ</i>	84
Immunofluorescence	85
Other staining procedures	86
11. Further applications of antibodies	86
Immunoaffinity chromatography	87
Detection of nucleic acids	87
Assays for enzymatic or DNA-binding activities	87
References	88

## 4. Identification of common post-translational modifications 91

*Radha G. Krishna and Finn Wold*

1. Introduction	91
2. General considerations	92
Hydrolysis and amino acid analysis	92
Protein sequencing	92
Mass spectrometry of modified proteins, peptides, and liberated amino acids	93

## Contents

<b>3. Specific cases</b>	94
D-Amino acids	94
Glycoprotein characterization	99
Unlocking the N terminus in acetylated proteins	104
Characterization of phosphorylated proteins	108
<b>4. Concluding remarks</b>	112
References	113
<b>5. Peptide mapping</b>	117
<i>Nick A. Morrice and Elizabeth A. Carrey</i>	
<b>1. Introduction: strategies</b>	117
<b>2. Cleavage of peptide bonds</b>	118
Chemical methods	118
Proteolytic enzymes	120
Controlled proteolysis and complete proteolysis	121
Proteolysis in SDS solutions	128
<b>3. Separation of polypeptide fragments</b>	129
Polyacrylamide gel electrophoresis and isoelectric focusing	129
Chromatography	131
Capillary zonal electrophoresis (CZE)	132
Mass spectrometry (MS)	134
Combining techniques to generate maps	134
<b>4. Electroblobs as the second or third dimension</b>	137
Electroblotting procedure	137
Identification of polypeptide fragments	138
<b>5. Sequencing strategies</b>	143
Use of the electroblot	143
Sequencing from gel slices	144
Sequencing from HPLC fractions	144
Phosphorylated peptides	145
Acknowledgements	147
References	148
<b>6. Counting integral numbers of residues by chemical modification</b>	151
<i>Michelle Hollecker</i>	
<b>1. Introduction</b>	151
Advantages of the method	151
Limitations of the method	152

## Contents

2. Cysteine residues	152
Choice of reagents for modifying thiol groups specifically	152
Experimental procedure	153
Counting cysteine residues	155
3. Disulfide bonds	155
Experimental procedures	156
Counting disulfide bonds	158
4. Lysine residues	159
Choice of reagent	159
Experimental procedure	159
Counting amino groups	160
5. Electrophoretic resolution of the modified species	161
Counting cysteine residues and disulfide bonds	162
Counting lysine residues	162
References	163
7. Disulfide bonds between cysteine residues	165
<i>William R. Gray</i>	
1. Introduction	165
Planning the general approach	166
2. The classical fragmentation strategy	167
Fragmentation of protein	167
Peptide purification	169
Identification of cystine-containing peptides	170
Identification of subfragments	172
Specific examples	173
3. The TCEP strategy	174
Partial reduction	174
Preparation of incompletely reduced peptides (full-length)	177
Labelling the intermediates	178
Identifying the labelled cysteines	182
Comparing disulfide fingerprints with TCEP	183
4. Concluding comment	184
References	185
8. Analysis of protein conformation by gel electrophoresis	187
<i>David P. Goldenberg</i>	
1. Introduction and basic principles	187

## Contents

2. Non-denaturing gel electrophoresis of proteins	191
Apparatus	191
Buffer systems	191
Gel composition	197
Polymerization catalysts	197
Sample preparation, application, and electrophoresis	198
Staining gels	199
Drying gels	200
Documentation and quantification of electrophoresis patterns	202
3. Transverse gradient gel electrophoresis	204
Apparatus for transverse gradient gel electrophoresis	206
Solutions for urea gradient gel electrophoresis	207
Sample preparation and electrophoresis	208
Interpreting urea gradient gel patterns	212
References	217
9. Hydrodynamic properties of proteins	219
<i>Stephen E. Harding</i>	
1. Renaissance of hydrodynamic techniques	219
2. Mass and quaternary structure measurement	220
Gel filtration and size exclusion chromatography	220
Dynamic light scattering (DLS)	222
Sedimentation velocity in the analytical ultracentrifuge	231
Sedimentation equilibrium	236
Classical light scattering	240
3. Shape measurement	246
Computer programs for conformational analysis	247
References	249
10. How to determine the molar absorbance coefficient of a protein	253
<i>C. Nick Pace and Franz X. Schmid</i>	
1. Introduction	253
2. Absorbance coefficients for tryptophan, tyrosine, and the disulfide bond	254
3. Calculation of absorbance coefficients from protein reference data	254
4. Determination of the absorbance coefficient for the unfolded and the folded protein	255

## Contents

5. Concluding remarks	258
References	259
<b>11. Optical spectroscopy to characterize protein conformation and conformational changes</b>	<b>261</b>
<i>Franz X. Schmid</i>	
1. Introduction	261
2. Absorbance	262
Spectrophotometers	267
Samples and cuvettes	268
Instrumental settings	270
Experimental protocol for the determination of the difference spectrum between the native and unfolded states of a protein	271
Data interpretation	273
3. Fluorescence	275
Fluorescence of the aromatic amino acids	275
Fluorescence of proteins	275
Environmental effects on Tyr and Trp emission	278
Measurement of protein fluorescence	279
Fluorimetric determination of the Trp content of proteins	286
4. Circular dichroism	287
CD spectra of native and unfolded proteins	288
Measurement of circular dichroism	288
Measurement of CD spectra of proteins	292
Evaluation of data	294
Determination of protein secondary structure by CD	295
References	296
<b>12. Measuring the conformational stability of a protein</b>	<b>299</b>
<i>C. Nick Pace and J. Martin Scholtz</i>	
1. Introduction	299
2. Selecting a technique to follow unfolding	300
3. Determining unfolding curves	303
Equilibrium and reversibility	303
Urea and GdmCl unfolding	304
Thermal unfolding	307

## Contents

4. Analysing unfolding curves	309
Urea and GdmCl unfolding	310
Thermal unfolding	313
5. Determining differences in stability	317
6. Concluding remarks	320
Acknowledgements	320
References	320
<b>13. Immunochemical analysis of protein conformation</b>	<b>323</b>
<i>Bertrand Friguet, Lisa Djavadi-Ohanian, and Michel E. Goldberg</i>	
1. Introduction	323
2. Antibody selection: how to obtain the appropriate antibodies	324
Important remarks: what should be remembered?	326
3. Antibody characterization	328
Antibody purification	328
Isotype determination	330
Discrimination between anti-native and anti-denatured antibodies	330
Do the antibodies recognize different epitopes?	331
4. The affinity, a quantitative parameter to analyse conformational changes	332
Preparation of 'fragments antigen binding' (Fab)	333
Stoichiometry determination	334
Are monovalent Fabs always required for affinity measurements in solution?	335
5. Affinity measurements in solution by competition ELISA	335
Theoretical aspects	335
Rationale	336
Requirements for the determination of $K_D$	337
Determination of $K_D$	339
Calculation	340
Determination of $K_D$ with impure antibody	341
6. Affinity measurement in solution by a radioimmunoassay-based method	342
7. General considerations about the competition methods	344
8. Antibodies used as conformational probes	345
References	346
