

Kenneth Lange

# Mathematical and Statistical Methods for Genetic Analysis

Springer

# Contents

<b>Preface</b>	<b>vi</b>
<b>1 Basic Principles of Population Genetics</b>	<b>1</b>
1.1 Introduction	1
1.2 Genetics Background	1
1.3 Hardy-Weinberg Equilibrium	4
1.4 Linkage Equilibrium	8
1.5 Selection	9
1.6 Balance Between Mutation and Selection	11
1.7 Problems	12
References	17
<b>2 Counting Methods and the EM Algorithm</b>	<b>19</b>
2.1 Introduction	19
2.2 Gene Counting	19
2.3 Description of the EM Algorithm	21
2.4 Ascent Property of the EM Algorithm	22
2.5 Allele Frequency Estimation by the EM Algorithm	24
2.6 Classical Segregation Analysis by the EM Algorithm	25
2.7 Problems	28
References	33
<b>3 Newton's Method and Scoring</b>	<b>35</b>
3.1 Introduction	35

3.2	Newton's Method . . . . .	35
3.3	Scoring . . . . .	36
3.4	Application to the Design of Linkage Experiments . . . . .	39
3.5	Quasi-Newton Methods . . . . .	42
3.6	The Dirichlet Distribution . . . . .	43
3.7	Empirical Bayes Estimation of Allele Frequencies . . . . .	44
3.8	Problems . . . . .	47
	References . . . . .	50
<b>4</b>	<b>Hypothesis Testing and Categorical Data</b>	<b>52</b>
4.1	Introduction . . . . .	52
4.2	Hypotheses About Genotype Frequencies . . . . .	52
4.3	Other Multinomial Problems in Genetics . . . . .	55
4.4	The $Z_{\max}$ Test . . . . .	56
4.5	The $W_d$ Statistic . . . . .	58
4.6	Exact Tests of Independence . . . . .	60
4.7	The Transmission/Disequilibrium Test . . . . .	62
4.8	Problems . . . . .	64
	References . . . . .	67
<b>5</b>	<b>Genetic Identity Coefficients</b>	<b>70</b>
5.1	Introduction . . . . .	70
5.2	Kinship and Inbreeding Coefficients . . . . .	70
5.3	Condensed Identity Coefficients . . . . .	74
5.4	Generalized Kinship Coefficients . . . . .	75
5.5	From Kinship to Identity Coefficients . . . . .	75
5.6	Calculation of Generalized Kinship Coefficients . . . . .	77
5.7	Problems . . . . .	80
	References . . . . .	83
<b>6</b>	<b>Applications of Identity Coefficients</b>	<b>85</b>
6.1	Introduction . . . . .	85
6.2	Genotype Prediction . . . . .	86
6.3	Covariances for a Quantitative Trait . . . . .	87
6.4	Risk Ratios and Genetic Model Discrimination . . . . .	90
6.5	An Affecteds-Only Method of Linkage Analysis . . . . .	93
6.6	Problems . . . . .	97
	References . . . . .	100
<b>7</b>	<b>Computation of Mendelian Likelihoods</b>	<b>102</b>
7.1	Introduction . . . . .	102
7.2	Mendelian Models . . . . .	102
7.3	Genotype Elimination and Allele Consolidation . . . . .	105
7.4	Array Transformations and Iterated Sums . . . . .	107
7.5	Array Factoring . . . . .	109

7.6	Examples of Pedigree Analysis . . . . .	111
7.7	Problems . . . . .	117
	References . . . . .	121
<b>8</b>	<b>The Polygenic Model</b>	<b>123</b>
8.1	Introduction . . . . .	123
8.2	Maximum Likelihood Estimation by Scoring . . . . .	124
8.3	Application to Gc Measured Genotype Data . . . . .	128
8.4	Multivariate Traits . . . . .	129
8.5	Left and Right-Hand Finger Ridge Counts . . . . .	130
8.6	The Hypergeometric Polygenic Model . . . . .	131
8.7	Application to Risk Prediction . . . . .	135
8.8	Problems . . . . .	136
	References . . . . .	139
<b>9</b>	<b>Markov Chain Monte Carlo Methods</b>	<b>142</b>
9.1	Introduction . . . . .	142
9.2	Review of Discrete-Time Markov Chains . . . . .	143
9.3	The Hastings-Metropolis Algorithm and Simulated Annealing . . . . .	146
9.4	Descent States and Descent Graphs . . . . .	148
9.5	Descent Trees and the Founder Tree Graph . . . . .	150
9.6	The Descent Graph Markov Chain . . . . .	153
9.7	Computing Location Scores . . . . .	156
9.8	Finding a Legal Descent Graph . . . . .	157
9.9	Haplotyping . . . . .	158
9.10	Application to Episodic Ataxia . . . . .	158
9.11	Problems . . . . .	159
	References . . . . .	161
<b>10</b>	<b>Reconstruction of Evolutionary Trees</b>	<b>164</b>
10.1	Introduction . . . . .	164
10.2	Evolutionary Trees . . . . .	165
10.3	Maximum Parsimony . . . . .	166
10.4	Review of Continuous-Time Markov Chains . . . . .	169
10.5	A Nucleotide Substitution Model . . . . .	171
10.6	Maximum Likelihood Reconstruction . . . . .	174
10.7	Origin of the Eukaryotes . . . . .	175
10.8	Problems . . . . .	178
	References . . . . .	181
<b>11</b>	<b>Radiation Hybrid Mapping</b>	<b>183</b>
11.1	Introduction . . . . .	183
11.2	Models for Radiation Hybrids . . . . .	184
11.3	Minimum Obligate Breaks Criterion . . . . .	185
11.4	Maximum Likelihood Methods . . . . .	187

11.5	Application to Haploid Data . . . . .	190
11.6	Polyploid Radiation Hybrids . . . . .	191
11.7	Maximum Likelihood Under Polyploidy . . . . .	191
11.8	Obligate Breaks Under Polyploidy . . . . .	195
11.9	Bayesian Methods . . . . .	196
11.10	Application to Diploid Data . . . . .	199
11.11	Problems . . . . .	201
	References . . . . .	204
<b>12</b>	<b>Models of Recombination</b>	<b>206</b>
12.1	Introduction . . . . .	206
12.2	Mather's Formula and Its Generalization . . . . .	207
12.3	Count-Location Model . . . . .	209
12.4	Stationary Renewal Models . . . . .	211
12.5	Poisson-Skip Model . . . . .	213
12.6	Chiasma Interference . . . . .	219
12.7	Application to <i>Drosophila</i> Data . . . . .	221
12.8	Problems . . . . .	223
	References . . . . .	225
<b>13</b>	<b>Poisson Approximation</b>	<b>228</b>
13.1	Introduction . . . . .	228
13.2	Poisson Approximation to the $W_d$ Statistic . . . . .	229
13.3	Construction of Somatic Cell Hybrid Panels . . . . .	230
13.4	Biggest Marker Gap . . . . .	232
13.5	Randomness of Restriction Sites . . . . .	234
13.6	DNA Sequence Matching . . . . .	237
13.7	Problems . . . . .	240
	References . . . . .	243
	<b>Appendix: Molecular Genetics in Brief</b>	<b>245</b>
A.1	Genes and Chromosomes . . . . .	245
A.2	From Gene to Protein . . . . .	246
A.3	Manipulating DNA . . . . .	248
A.4	Mapping Strategies . . . . .	250
	References . . . . .	252
	<b>Index</b>	<b>255</b>
