## Culture and Biochemical Analysis of Cells

VOLUME 1

### SECTION 1 Cell Culture and Analysis

1. Mammalian Cell Culture, 1.1
2. Growth and Manipulation of Cells in Culture, 2.1
3. Extracellular Matrix Components as Substrata in Cell and Tissue Culture, 3.1
4. Isolation and Culture of Fibroblasts, 4.1
5. Culture of Epithelial Cells, 5.1
6. Isolation of Human Capillary Endothelial Cells, 6.1
7. Isolation and Transformation of Lymphocytes, 7.1
8. Culture and In Vitro Differentiation of Mouse Embryonic Stem Cells, 8.1
9. Isolation and Culture of Primary Neural Cells, 9.1
10. Isolation and Culture of Chick Embryo Myoblasts, 10.1
11. Isolation and Culture of Neonatal Rat Cardiomyocytes, 11.1
12. Isolation and Culture of Adult Rat Ventricular Myocytes, 12.1
13. Fusion of Somatic Cells, 13.1
14. Cell Synchronization, 14.1
15. Apoptosis Assays, 15.1
16. Flow Cytometry, 16.1
17. Culture and Manipulation of Hypotrichous Ciliated Protozoa, 17.1
18. Culture and Manipulation of *Tetrahymena*, 18.1
19. Culture and Genetic Analysis of *Chlamydomonas*, 19.1
20. Culture and Analysis of *Dictyostelium discoideum*, 20.1
21. Growth and Transformation of *Saccharomyces cerevisiae*, 21.1
22. Growth and Transformation of *Schizosaccharomyces pombe*, 22.1
23. Culture of Marine Invertebrate Embryos, 23.1

### SECTION 2 Metabolic Labeling and Protein Modification

24. Steady-State Labeling of HeLa Cells with  $^{32}\text{P}$  Phosphate, 24.1
25. In Vitro Nuclear Run-on Analysis of mRNA Transcription, 25.1
26. Metabolic Radiolabeling of Proteins, 26.1
27. Metabolic Labeling of Cells with  $^{32}\text{P}$  for Studies of Protein Phosphorylation, 27.1
28. Study of Protein Phosphorylation Using Permeabilized Cells and Organelles, 28.1
29. Protein Kinase Assays Using Exogenous Substrates, 29.1
30. Kinetics for Kinases: Simple Enzyme Kinetics Applied to Two-substrate Enzymes, 30.1
31. Simple Preparations of Protein Phosphatases, 31.1
32. Methylation and Prenylation of Proteins, 32.1
33. Protein Glycosylation, 33.1

## SECTION 3

### Subcellular Fractionation

34. Subcellular Fractionation, 34.1
35. Plasma Membrane Isolation Using the Cationic Colloidal Silica Isolation Technique, 35.1
36. Isolation of Desmosomes, 36.1
37. Subcellular Fractionation of Rough Microsomes, 37.1
38. Purification of Ribosomes, Ribosomal Subunits, and Polysomes, 38.1
39. Golgi Apparatus Isolation and Characterization, 39.1
40. Isolation of Peroxisomes (Microbodies) from Mammalian Tissues, 40.1
41. Isolation of Mitochondria from Cells and Tissues, 41.1
42. Isolation of Intact Chloroplasts, 42.1
43. Preparation of Nuclei from Tissue and Suspension Cultures, 43.1
44. The Nuclear Matrix: Preparation for Microscopy and Biochemical Analysis, 44.1
45. Permeabilized Cell Assay for Nuclear Protein Import, 45.1
46. Analysis of Nucleocytoplasmic Shuttling Using Transient Interspecies Heterokaryons, 46.1
47. Preparation and Characterization of the Nuclear Lamina and Nuclear Lamina-enriched Fractions, 47.1
48. Isolation of Nucleoli, 48.1
49. Chromosome Isolation for Biochemical and Morphological Analysis, 49.1
50. Purification and Southern Blotting Analysis of DNA, 50.1
51. Purification and Northern Blot Analysis of Total RNA from Cells and Tissues, 51.1
52. Spread Preparation of *Xenopus* Germinal Vesicle Contents, 52.1
53. Purification of Myosin and Actin from Muscle and Nonmuscle Cells, 53.1
54. Isolation of Microtubules, MAPs, and Microtubule-dependent Motor Proteins, 54.1
55. Isolation and Purification of Intermediate Filaments, 55.1

## SECTION 4

### Protein Identification and Analysis

56. Determination of Protein Concentration, 56.1
57. One-Dimensional Gel Electrophoresis of Proteins, 57.1
58. Two-Dimensional Gel Electrophoresis of Proteins, 58.1
59. Detection of Proteins by Staining, 59.1
60. Detection of Proteins by Autoradiography, Fluorography, and Phosphor Imaging, 60.1
61. One-Dimensional and Two-Dimensional Peptide Mapping, 61.1
62. Peptide Mapping and Peptide Purification by RP-HPLC, 62.1
63. Sequencing of Proteins and Peptides, 63.1

## SECTION 5

### Protein Expression and Interactions

64. Producing Proteins in a T7 Expression System, 64.1
65. Expression and Purification of Proteins Using GST Gene Fusion Vectors, 65.1
66. Baculovirus Expression: Generation of Recombinant Baculovirus DNA in *E. coli* Using a Baculovirus Shuttle Vector, 66.1

67. Mammalian Expression Vectors, 67.1
68. An Autoregulatory, Tetracycline-controlled System for Inducible Gene Expression in Mammalian Cells, 68.1
69. Two-hybrid System/Interaction Trap, 69.1

## SECTION 6

### **Antibodies as Tools in Cell Biology**

70. Overview of Antibody Purification and Labeling, 70.1
71. Epitope Tagging, 71.1
72. Immunoprecipitation, 72.1
73. Immunoblotting and Immunoblot Affinity Purification, 73.1
74. Human Autoantibodies and Characterization of Their Target Antigens, 74.1

## **Light Microscopy and Cell Structure**

### VOLUME 2

## SECTION 7

### **Observation of Live Cells and Cellular Dynamics**

75. Observation of Live Cells in the Light-Microscope, 75.1
76. Monitoring Molecular Dynamics In Vivo Using Fluorescence Techniques, 76.1
77. Phagokinetic Track Assay of Cell Locomotion in Tissue Culture, 77.1
78. Heterologous Expression of the Green Fluorescent Protein, 78.1
79. Fluorescence Photobleaching Techniques, 79.1
80. Imaging and Measurement of Intracellular Free Calcium In Living Cells, 80.1
81. Construction of Optical Tweezers, 81.1

## SECTION 8

### **Preparation of Macromolecules and Introduction into Cells**

82. Fluorescence Labeling of Antibodies and DNA Probes, 82.1
83. Quantitative Microinjection of Living Cells, 83.1
84. Injection of *Xenopus* Oocytes and Embryos, 84.1
85. Direct Injection of DNA into Rodent Muscle, 85.1
86. Transfection of DNA into Mammalian Cells, 86.1
87. Delivery of DNA into Mammalian Cells Using Cationic Liposomes, 87.1
88. Electroporation and Electrofusion, 88.1
89. Delivery of Antisense Oligonucleotides, 89.1
90. Use and Application of Adenovirus Expression Vectors, 90.1
91. Replication-defective Herpesvirus Amplicon Vectors and Their Use for Gene Transfer, 91.1
92. Transduction of Genes Using Retroviral Vectors, 92.1
93. Lineage Analysis Using Retroviral Vectors, 93.1

**SECTION 9****Light and Epifluorescence Microscopy**

- 94. Light Microscopy, 94.1
- 95. Video Microscopy and Image Enhancement, 95.1

**SECTION 10****Confocal Microscopy, Multiphoton Microscopy, and Deconvolution**

- 96. Confocal Microscopy and Deconvolution Techniques, 96.1
- 97. Multiphoton Excitation Fluorescence Microscopy, 97.1

**Subcellular Localization of Genes and Their Products**  
**VOLUME 3****SECTION 11****Visualization of Organelles, Proteins, and Gene Expression**

- 98. Preparation of Cells and Tissues for Fluorescence Microscopy, 98.1
- 99. Detection of  $\beta$ -Galactosidase and Alkaline Phosphatase Activities in Tissues, 99.1
- 100. Immunolocalization of Proteins Using Enzyme Detection, 100.1
- 101. Nonimmunological Fluorescent Labeling of Cellular Structures, 101.1
- 102. Introduction to Immunofluorescence Microscopy, 102.1
- 103. Immunostaining of Microtubules, Microtubule-associated Proteins, and Intermediate Filaments, 103.1
- 104. Immunofluorescence Localization of Actin, 104.1
- 105. Immunofluorescence Localization of Nuclear Proteins, 105.1
- 106. Immunofluorescence Methods for *Saccharomyces cerevisiae*, 106.1
- 107. Immunofluorescence Methods for *Drosophila* Tissues, 107.1
- 108. Immunofluorescence Methods for *C. elegans*, 108.1
- 109. Analyzing DNA Replication: Nonisotopic Labeling, 109.1
- 110. Analyzing RNA Synthesis: Nonisotopic Labeling, 110.1

**SECTION 12****In Situ Hybridization**

- 111. Fluorescence In Situ Hybridization to DNA, 111.1
- 112. Comparative Genomic Hybridization, 112.1
- 113. Chromosome Analysis by Spectral Karyotyping, 113.1
- 114. In Situ Hybridization of DNA and Nuclear RNA in Tissue Squashes Using  $^3\text{H}$ -labeled Probes, 114.1
- 115. Whole-Mount Fluorescence In Situ Hybridization to *Drosophila* Chromosomal DNA, 115.1

116. In Situ Hybridization to RNA, 116.1
117. Whole-Mount In Situ Detection of RNAs in Vertebrate Embryos and Isolated Organs, 117.1
118. Whole-Mount In Situ Detection of RNAs in *Xenopus* Embryos, 118.1
119. In Situ Polymerase Chain Reaction, 119.1

## SECTION 13

### Electron Microscopy

120. Image Production Using Transmission Electron Microscopy, 120.1
121. Preparative Methods for Transmission Electron Microscopy, 121.1
122. Image Production Using Scanning Electron Microscopy, 122.1
123. Preparative Methods for Scanning Electron Microscopy, 123.1
124. Scanning Transmission Electron Microscopy, 124.1
125. Electron Microscopy of DNA and DNA-binding Proteins, 125.1
126. Snapshot Blotting of Nucleic Acids and Nucleoprotein Complexes, 126.1
127. Cytochemical Staining and Enzyme Detection for Electron Microscopy, 127.1
128. Immunoelectron Microscopy, 128.1
129. Rapid Freezing of Cells and Molecules, 129.1
130. Freeze Substitution, 130.1
131. Immunocytochemistry on Ultrathin Cryosections, 131.1
132. Freeze Fracture and Freeze-Fracture Cytochemistry, 132.1

## APPENDICES

- Appendix 1– Stock Solutions, Buffers, and Media Commonly Used in Cell Biology, A1.1
- Appendix 2– Basic Information for Cell Biologists, A2.1
- Appendix 3– Microscopy: Lenses, Filters, and Emission/Excitation Spectra, A3.1
- Appendix 4– Localization Markers for Subcellular Components, A4.1
- Appendix 5– Cautions, A5.1
- Appendix 6– Suppliers, A6.1
