

# GENOME ANALYSIS

---

A LABORATORY MANUAL

VOLUME 1

ANALYZING  
DNA

# Contents

## VOLUME 1

Preface, xv

Acknowledgments, xix

Contributors, xxi

Abbreviations and Acronyms, xxiii

## 1 Purifying and Analyzing Genomic DNA, 1

### OVERVIEW OF GENOMIC DNA ANALYSIS, 2

Historical Perspective, 2

Issues of Contamination and Safety, 2

### ISOLATION OF GENOMIC DNA, 3

#### DNA FROM MAMMALIAN SOURCES, 4

##### PROTOCOLS

*DNA Isolation from Tissue-culture Cell Lines Growing in Suspension, 6*

*Transforming Lymphoblasts with EBV, 9*

*Maintaining B95-8 and IA-3 EBV-producing Cell Lines, 11*

*DNA Isolation from Adherent Fibroblasts Using Trypsin, 12*

*DNA Isolation from Adherent Fibroblasts ("Sliming"), 13*

*DNA Isolation from Peripheral Blood, 14*

*DNA Isolation from Fresh and Frozen Tissues, 15*

*DNA Isolation from a Mammalian Model Organism: The Mouse, 16*

#### DNA FROM ANIMAL MODEL ORGANISMS, 17

##### PROTOCOLS

*DNA Isolation from D. melanogaster, 18*

*DNA Isolation from C. elegans, 20*

#### DNA FROM PLANTS, 23

##### PROTOCOL

*DNA Isolation from Arabidopsis thaliana, 24*

**DNA FROM YEAST, 26**

**PROTOCOLS**

*DNA Isolation from S. cerevisiae, 27*

*DNA Isolation from S. pombe, 30*

**DNA FROM BACTERIA, 34**

**PROTOCOL**

*DNA Isolation from E. coli, 35*

**TROUBLESHOOTING FOR GENOMIC DNA ISOLATION, 37**

Degradation and Fragmentation of the DNA, 37

Poor Recovery of DNA, 37

Contamination of the DNA with Proteins, 37

Contamination of the DNA with RNA, 37

**SOUTHERN BLOTTING, 38**

**DIGESTION OF DNA WITH RESTRICTION ENZYMES, 39**

**PROTOCOL**

*Digesting Genomic DNA with Restriction Enzymes, 43*

**ELECTROPHORETIC SEPARATION OF DIGESTION PRODUCTS, 45**

**PROTOCOL**

*Size Fractionating Digested DNA on Agarose Gels, 47*

**TRANSFER OF DNA ONTO SOLID SUPPORTS, 49**

**PROTOCOL**

*Transferring Size-fractionated DNA onto Solid Supports, 50*

**HYBRIDIZATION OF PROBES TO IMMOBILIZED DNA, 56**

**PROTOCOL**

*Gel Purification of DNA Fragments for Use as Probes, 57*

**RADIOLABELING DNA PROBES, 59**

**PROTOCOLS**

*Radiolabeling Probes by Random Priming with Hexameric Oligonucleotides, 60*

*End-labeling Oligonucleotide Probes, 62*

**BLOCKING REPETITIVE DNA SEQUENCES, 64**

**PROTOCOLS**

*Preannealing Probes to Cot 1 Blocking DNA, 65*

*Preannealing Probes to Genomic Blocking DNA, 67*

**DETECTING UNIQUE SEQUENCES ON MEMBRANES BY USING RADIOLABELED  
PROBES, 68**

**PROTOCOLS**

*Hybridization Using Probes Labeled by Random Priming, 70*

*Hybridization Using End-labeled Oligonucleotide Probes, 75*

**USE OF NONRADIOACTIVE PROBES FOR HYBRIDIZATION, 77**

Biotinylation of Probe DNA, 77

Membrane Preparation, 77

Hybridization and Washing, 77

Detection of Chemiluminescence, 77

**TROUBLESHOOTING FOR SOUTHERN BLOTTING, 78**

Problems with the DNA Sample, 78

Problems with the Gel, 79

Problems with Transferring the DNA onto the Solid Support, 79

Problems with Hybridizing Radioactive or Nonradioactive Probes to the DNA, 79

## 2 Preparation, Manipulation, and Mapping of HMW DNA, 83

### PRINCIPLES OF PREPARING AND MANIPULATING HMW DNA, 84

General Characteristics of HMW DNA, 84

Principles in the Preparation of HMW DNA, 84

Assessing the Quality of HMW DNA, 89

Quantitating HMW DNA, 89

### PREPARATION OF HMW MAMMALIAN DNA, 91

#### PROTOCOLS

*Preparing Mononuclear Cells from Whole Blood by Centrifugation on Histopaque, 93*

*Isolating White Blood Cells from Whole Blood by Sedimentation After Lysis of Red Blood Cells, 95*

*Preparing HMW DNA in Agarose Starting from Frozen Whole Blood, 97*

*Preparing Cells from Tissues, 99*

*Preparing Cells from Tissue Culture, 100*

*Preparing Cells from Frozen Semen, 101*

*Using Proteinase K to Prepare HMW Mammalian DNA Embedded in Agarose Plugs, 103*

*Using LIDS to Prepare HMW Mammalian DNA Embedded in Agarose Plugs, 106*

*Preparing HMW Mammalian DNA in Agarose Beads, 109*

*Purifying HMW Mammalian DNA in Liquid Form, 112*

### PREPARATION OF HMW YEAST DNA, 117

#### PROTOCOLS

*Growing S. cerevisiae Cells, 119*

*Using Proteinase K to Prepare HMW Yeast DNA Embedded in Agarose Plugs, 121*

*Using LIDS to Prepare HMW Yeast DNA Embedded in Agarose Plugs, 125*

*Preparing HMW Yeast DNA in Agarose Beads, 128*

*Purifying HMW Yeast DNA in Liquid Form, 132*

### PREPARATION OF HMW DNA FROM BACTERIAL CLONES, 135

#### PROTOCOLS

*Preparing HMW Bacterial DNA Embedded in Agarose Plugs, 136*

*Preparing HMW Bacterial DNA in Agarose Beads, 139*

### DIGESTION OF HMW DNA WITH RESTRICTION ENZYMES, 142

### COMPLETE DIGESTION OF HMW DNA SAMPLES, 143

#### PROTOCOLS

*Complete Digestion of HMW DNA Embedded in Agarose Plugs, 145*

*Complete Digestion of HMW DNA Embedded in Agarose Beads, 148*

*Complete Digestion of HMW DNA in Liquid Form, 151*

### PARTIAL DIGESTION OF HMW DNA SAMPLES, 152

#### PROTOCOLS

*Partial Digestion by Varying the Concentration of Restriction Enzyme, 157*

*Partial Digestion by Varying the Length of the Incubation with the Restriction Enzyme, 160*

*Partial Digestion by Varying the  $Mg^{++}$  Concentration, 162*

*Partial Digestion by Methylase Competition, 165*

### ANALYSIS AND PREPARATIVE SIZE FRACTIONATION OF PARTIAL DIGESTION PRODUCTS, 169

#### PROTOCOLS

*Size Fractionation of Partial Digestion Fragments Using a Sucrose Density Gradient, 171*

*Concentration of Liquid HMW DNA Fragments by Vacuum Dialysis, 175*

**LONG-RANGE RESTRICTION MAPPING, 179**

General Principles for Long-range Restriction Mapping, 179

Selection of Enzymes for Generating Large DNA Fragments, 181

Mapping Reagents, 182

Construction of a Long-range Restriction Map, 183

Troubleshooting for Long-range Restriction Mapping, 184

**SITE-SPECIFIC CLEAVAGE OF DNA USING RARE CLEAVAGE, 186**

General Principles of RARE Cleavage, 186

Applications of RARE Cleavage, 189

**PROTOCOLS FOR RARE CLEAVAGE, 190**

**PROTOCOLS**

*RARE Cleavage with EcoRI or AluI in Low-percentage-agarose Plugs, 193*

*RARE Cleavage with EcoRI in Diced Agarose Plugs, 198*

*RARE Cleavage with EcoRI in Agarose Beads, 202*

Potential Problems and Troubleshooting for RARE Cleavage, 206

**PULSED-FIELD GEL ELECTROPHORESIS, 208**

Conventional Agarose Gel Electrophoresis and the Need for PFGE, 208

Setting Up the Components of a PFGE System, 210

Achieving Optimal Separation of DNAs, 210

Selecting Appropriate Electrophoresis Conditions, 215

Estimating DNA Fragment Sizes on a PFG, 218

Potential Problems with PFGE and Troubleshooting, 221

**SETTING UP AND RUNNING A PFG, 223**

**PROTOCOLS**

*Preparing the Gel and Loading DNA Samples in Agarose Beads or Plugs, 224*

*Casting the Gel Around DNA Samples in Agarose Plugs, 227*

*Preparing the Gel and Loading Liquid DNA Samples or Samples in Agarose Beads in a Submerged Gel, 228*

*Running and Staining the Gel, 230*

**PREPARATIVE PFGE FOR RECOVERY OF HMW DNA, 232**

**RECOVERING HMW DNA FROM A PREPARATIVE PFG, 233**

**PROTOCOLS**

*Recovery of DNA from PFGs for Applications That Do Not Require Intact HMW DNA, 234*

*Recovery of Intact HMW DNA from PFGs, 238*

Troubleshooting for the Recovery of Intact HMW DNA, 243

Handling and Treatment of Gel-purified HMW DNA for Transfer into Mammalian Cells, 243

**3 PCR in Genome Analysis, 249**

**BASIC PRINCIPLES AND COMPONENTS OF PCR, 250**

A Simple PCR Protocol, 251

Oligonucleotide Primers, 251

Sample Preparation, 252

Thermostable DNA Polymerases, 253

Instrumentation, 254

## BASIC PROTOCOLS NEEDED FOR PREPARING KEY COMPONENTS OF THE PCR ASSAY, 256

### PROTOCOLS

*Basic DNA Amplification, 257*

*Desalting Oligonucleotides by Precipitation, 259*

*Desalting Oligonucleotides on Nensorb Affinity Columns, 260*

*Rapid Preparation of Template DNA from Mammalian Cells, 262*

### OPTIMIZING PCR ASSAYS, 264

Selecting New Primers, 264

Modifying Thermal Cycling Conditions, 264

Altering the Mg<sup>++</sup> Concentration, 265

Altering the pH, 265

Altering Other Reaction Components, 265

Troubleshooting, 265

### METHODS FOR IMPROVING PCR, 267

Hot Start PCR, 267

Nested PCR, 267

Touch-down PCR, 267

Booster PCR, 267

### DETECTING AND CHARACTERIZING PCR PRODUCTS, 268

Detection Schemes, 268

Quantitative PCR, 269

Cloning PCR Products, 270

Amplification Using Mixed Oligonucleotides as Primers, 271

In Vitro Gene Assembly by PCR, 272

RT-PCR for Amplification from RNA, 273

In Situ PCR, 274

Amplification of Large DNA Segments (Long-range PCR), 275

PCR-based Fingerprinting, 277

Multiplex PCR, 281

### PROTOCOLS FOR DETECTING AND CHARACTERIZING PCR PRODUCTS, 282

#### PROTOCOLS

*Long-range PCR Protocol, 283*

*DD PCR Protocol, 285*

### CONTAMINATION IN PCR ASSAYS, 291

Sources of Contamination, 291

Avoidance of Contamination, 291

Elimination of Contamination, 291

### FURTHER READING, 293

## 4 Fluorescence-based DNA Sequencing, 301

### OVERVIEW OF DNA SEQUENCING METHODS, 303

### PREPARING SUBCLONED DNA TEMPLATES, 306

#### PROTOCOLS

*Preparing Single-stranded Bacteriophage M13 DNA Using PEG and Phenol, 308*

*Preparing Single-stranded Bacteriophage M13 DNA Using Detergent, 310*

*Preparing Single-stranded Phagemid DNA, 312*

*Purifying Double-stranded Plasmid DNA by Alkaline Lysis, 314*

*Purifying Double-stranded Plasmid DNA in a 96-well Format Using an Alkaline Lysis Kit, 317*

*Denaturing Double-stranded DNA for Sequencing, 319*

*Denaturing Double-stranded DNA and Annealing Primer to Template for Sequencing, 320*

## **PREPARING SEQUENCING TEMPLATES BY PCR, 321**

### **PROTOCOLS**

*Amplifying Subclone Inserts by PCR and Precipitating PCR Products with PEG to Purify Sequencing Template, 326*

*Treating PCR Products with Exonuclease I plus Shrimp Alkaline Phosphatase to Purify Sequencing Template, 329*

*Preparing Single-stranded Template DNA by Asymmetric PCR, 330*

*Preparing Single-stranded Template DNA from PCR Products Using Bacteriophage T7 Gene 6 Exonuclease, 332*

*Preparing Single-stranded Template DNA from PCR Products Using Bacteriophage  $\lambda$  Exonuclease, 334*

*Purifying Single-stranded Template DNA from PCR Products Using Streptavidin-linked Magnetic Beads, 336*

## **SEQUENCING PRIMERS, 339**

## **FLUORESCENCE-BASED DNA SEQUENCING REACTIONS, 340**

### **PROTOCOLS**

*Sequencing Reactions Using Fluorescent Dye-labeled Primers and Sequenase DNA Polymerase, 342*

*Sequencing Reactions Using Fluorescent Dye-labeled Primers and ThermoSequenase DNA Polymerase, 346*

*Sequencing Reactions Using Fluorescent Dye-labeled Primers and SequiTherm DNA Polymerase, 350*

*Sequencing Reactions Using Fluorescent Dye-labeled Terminators and ThermoSequenase DNA Polymerase, 355*

*Sequencing Reactions Using Fluorescent Dye-labeled Terminators and AmpliTaq DNA Polymerase FS, 358*

*Removing Unincorporated Dye-labeled Terminators after Cycle Sequencing by Using Sephadex in Filter Plates, 359*

*Removing Unincorporated Dye-labeled Terminators after Cycle Sequencing by Using Centri-Sep Columns, 361*

## **PREPARING, LOADING, AND RUNNING GELS ON FLUORESCENCE-BASED SEQUENCING INSTRUMENTS, 363**

### **PROTOCOLS**

*Washing and Assembling Gel Plates, 364*

*Pouring the Gel, 365*

*Loading and Running the Gel, 368*

## **TROUBLESHOOTING FOR FLUORESCENCE-BASED DNA SEQUENCING, 370**

*Problems Caused by Software, 370*

*Problems Caused by Templates or by Pipetting Errors, 372*

*Problems Caused by DNA Structure, 376*

## **STRATEGIES FOR DETERMINING CONTIGUOUS SEGMENTS OF DNA SEQUENCE, 379**

*Types of Strategies, 379*

*Choosing a Strategy, 379*

## **PRIMER-DIRECTED SEQUENCING, 384**

## DELETIONAL SEQUENCING, 385

## PROTOCOLS

*Digestion of Template DNA with Restriction Enzymes, 387**Digestion of Template DNA with Exonuclease III and Mung-bean Nuclease, 389**Religation of Subclones That Have Deletions and Transformation of E. coli, 391*

## SEQUENCING cDNA CLONES, 392

**5 Shotgun Sequencing**

## OVERVIEW OF SHOTGUN SEQUENCING, 398

## LIBRARY CONSTRUCTION, 399

## PREPARATION OF TARGET DNA, 402

## PROTOCOLS

*Purification of Bacterial Clone DNA on CsCl Gradients, 404**Preparation of Bacterial Clone DNA by Gentle Alkaline Lysis, 408**Purification of Agarose-embedded HMW Yeast DNA for Isolation of YAC DNA by Preparative PFGE, 410*

## FRAGMENTATION OF TARGET DNA, 414

## PROTOCOLS

*Random Fragmentation by Low-pressure Shearing in a French Pressure Cell, 415**Random Fragmentation by Sonication, 418**Random Fragmentation by Nebulization, 421**Random Fragmentation with DNase I, 424**Random Fragmentation by Partial Digestion with Sau3AI, 426*

## END REPAIR AND SIZE FRACTIONATION OF FRAGMENTED DNA, 428

## PROTOCOLS

*Using DNA Polymerases and Polynucleotide Kinase to Repair Fragment Ends, 429**Using Mung-bean Nuclease to Repair Fragment Ends, 431**Size Fractionation of Repaired DNA Fragments, 432*

## CLONING FRAGMENTED DNA, 434

## PROTOCOLS

*Vector Preparation, 436**Ligation of Vector DNA and Insert DNA, 439**Transforming Bacteria with Ligated DNA by Using Electroporation, 441**Preparation of Cells Competent for Electroporation, 441**Electroporation, 442**Transforming Bacteria with Ligated DNA by Using CaCl<sub>2</sub> and Heat Shock, 444**Preparation of Competent Cells, 444**Transformation, 445*

## INITIAL SEQUENCE ACQUISITION, DATA PROCESSING, AND SEQUENCE

## ASSEMBLY, 447

## SEQUENCE FINISHING, 448

*Subclone-directed Closure, 448**Primer-directed Closure, 449**Resolving Ambiguities, 450**Resolving Repeats, 456*

## 6 Transposon-mediated DNA Sequencing, 455

COMPARISON OF SHOTGUN SEQUENCING AND TRANSPOSON-MEDIATED SEQUENCING, 456

TRANSPOSONS USED FOR DNA SEQUENCING, 456

$\gamma\delta$  TRANSPOSON-MEDIATED DNA SEQUENCING, 459

PREPARING LIBRARIES OF SUBCLONES WITH 3–4-KB INSERTS FROM LARGE GENOMIC CLONES, 460

### PROTOCOLS

*Sonication, End Repair, and Size Selection of 3–4-kb Subclone Inserts, 463*

*Preparation of BstXI-digested pOT2A Vector DNA, 466*

*Addition of BstXI Adapters to Size-selected Insert DNA and Ligation to BstXI-digested Vector DNA, 468*

BUILDING INITIAL SUBCLONE TILING PATHS, 472

### PROTOCOL

*Building Initial Subclone Tiling Paths from End Sequences, 477*

SEQUENCING SUBCLONES BY USING THE  $\gamma\delta$  TRANSPOSON, 483

### PROTOCOLS

*Mobilizing Transposons into Subclones, 487*

*Mapping  $\gamma\delta$  Transposon-insertion Sites by Using PCR, 489*

*Sequencing the Minimal Set of Transposon-bearing Templates, 491*

*Assembling Subclone Sequences, 492*

EXTENDING SUBCLONE TILING PATHS AND ASSEMBLING SUBCLONE SEQUENCES INTO LARGER CONTIGS, 494

### PROTOCOL

*Extending Stalled Contigs in the Tiling Path and Assembling the Finished Genomic Clone Sequence, 495*

IN VITRO TY1 TRANSPOSON-MEDIATED DNA SEQUENCING, 498

INTEGRATION OF ARTIFICIAL TRANSPOSONS INTO TARGET DNA IN VITRO, 500

### PROTOCOLS

*Preparation of AT-2 for In Vitro Integration, 503*

*Purification of VLPs for In Vitro Integration, 506*

*Growing Gal-Ty1 Yeast Strains and Inducing the GAL1 Promoter, 506*

*Recovering and Lysing Cells, 507*

*Centrifuging the Lysate on a Sucrose Gradient and Identifying Fractions with Integrase Activity, 510*

*In Vitro Integration of AT-2 into Target DNA, 512*

*Recovery of Recombinant Plasmids by Electroporation and Selection with Antibiotics, 514*

SEQUENCING FROM MAPPED OR RANDOMLY CHOSEN TRANSPOSON-INSERTION SITES, 517

### PROTOCOLS

*Mapping Ty1 Transposon-insertion Sites by Using PCR, 521*

*Restriction Mapping of Ty1 Transposon-insertion Sites, 523*

*Sequencing DNA from Sites of AT-2 Insertion, 527*

TROUBLESHOOTING FOR IN VITRO TY1 TRANSPOSON-MEDIATED SEQUENCING, 529

*Evaluation of Integration Efficiency, 529*

*Optimization of Molar Ratios of Transposon DNA to Target DNA, 529*

*Cotransformation with Parental Target Plasmids and Recombinants, 529*

*Contamination by Recombinants from Previous Experiments, 530*

## 7 Computational Analysis of DNA and Protein Sequences, 533

### INTERNET BASICS, 534

- Electronic Mail, 534
- File Transfer Protocol, 535
- Gopher, 537
- The World Wide Web, 538
- Electronic Publishing, 541
- Specialized Client-Server Applications, 542

### SEQUENCE ANALYSIS, 543

- Searching Databases for Similarities, 543
  - Sequence Databases, 543*
  - The BLAST Family of Programs: Uses and Examples, 544*
    - DNA Query Sequences, 546
    - Protein Query Sequences, 554
    - Confounding Subsequences and Query Masking, 555
    - Additional BLAST Options, 558

### INTEGRATED INFORMATION RETRIEVAL, 560

- The Entrez System, 561
- Specialized Data Sets, 566
  - C. elegans, 566*
  - D. melanogaster, 573*

### MULTIPLE ALIGNMENT, SEQUENCE MOTIFS, AND STRUCTURE INFERENCE, 574

- Multiple Alignment, 574
- Sequence Motifs, 575
- Structure Prediction and Protein Modeling, 576

### SUBMITTING DATA TO PUBLIC DATABASES, 579

- Preparing a New Submission, 580
- Updates and Corrections, 581
- Special Arrangements for Large Projects, 583

## APPENDICES

### 1 Common Reagents, 589

- Standard Stock Solutions, 590
- Molarities of Concentrated Acids and Bases, 597
- Common Laboratory Solutions, 598
- Electrophoresis Buffers, Dyes, and Gel-loading Solutions, 601
- Media, 605
- Antimicrobial Agents, 610

## 2 Basic Procedures, 613

Quantitation of Cell Concentration, 614

Standard Methods Used for Isolating DNA, 617

*Extraction of DNA Samples with Organic Chemicals, 617*

*Concentration of DNA Samples by Precipitation with Alcohols, 621*

*Quantitation of DNA, 624*

*Dialysis of DNA, 628*

Assessing the Extent of Radiolabeling in DNA Probes by Precipitation with TCA, 630

Dilution and Storage of Oligonucleotides, 632

Storage and Shipment of Biological Samples, 633

## 3 Safety Cautions, 639

## 4 Useful Facts, 647

Conversion Factors, 648

Genome Comparisons, 649

Average Sizes of DNA Fragments Generated by Cleavage with Restriction Enzymes, 650

Single-letter Abbreviations for Amino Acids, 651

Genetic Code, 652

Codon Facts, 653

Isotope Information, 654

## 5 Suppliers, 655

Index, 657
